Our paint protection film range

CLEAR / GLOSS / MAT

PROTECTOR CLEAR

Your collection or prestige car's Must

It provides effective protection for the bodywork against light impacts, scratches, insects or even salt from gritted roads in winter, as well as giving the bodywork a matt appearance. Here, our clearest version!

PROTECTOR GLOSS

Improve your daily driving experience

Beyond the usual protection provided with a ppf, our version here will top up with extreme hydrophobic reaction, helping your day to day car to remain.

PROTECTOR MAT

Protects while remaining aesthetic

Matt bodywork is very fashionable nowadays, so if you are hesitating, our ppf will appear as a perfect alternative, with its surface protection.

KNIVES & SCISSORS

Discover our wide range of cutters: from safety blades to precision knives and specific cutting tools, find the cutter that suits your needs.

SPARE BLADES

Stay sharp by refilling your cutting equipment with a wide range of blades, large and small. Make sure you always have quality blades on hand for uninterrupted work and precise, efficient cutting without damaging the glass.

SCRAPING & CLEANING

Prepare the surface of your windows before applying the adhesive film with our selection of scraping and cleaning tools. Remove glue, paint and dirt residue with our professional scrappers and cloths.

CUTTING TOOLS

Simplify the cutting of your adhesive film with our range of cutting aids. Cut your media accurately and with no offsets, for a result that is synonymous with perfection.

SQUEEGEES

Get a perfect finish to your adhesive film with our range of professional quality squeegees. Our squeegees provide a smooth, even finish by removing air bubbles and excess water.

SMART TOOLS

Intelligent tools for precise and fast installation of adhesive film, even in the most complex installations. Thanks to our selection of innovative tools, you can apply your adhesive film with greater ease and efficiency, for a perfect result.

INSTALLATION TOOLS

A complete range of intelligent tools designed to make the installation of adhesive film on glass surfaces quick and easy. Professional-grade tools for fast, accurate installation that will save you time on your projects.

HEAT GUNS & MORE

Use thermal tools to control the heat and shaping of your materials. Thanks to their thermal performance, our tools allow you to control the heat and thus obtain a precise and uniform result. In addition, their ergonomic design and ease of handling make them comfortable and safe to use for long periods of time.

WORKSHOP GEAR

Our products help you optimise your workspace safely. With our range of workshop equipment, you will benefit from a comfortable, fast and safe installation, for an optimal result.

LIQUIDS

Our high-quality products include application fluids to facilitate installation, cleaning solutions to remove impurities and stripping solutions to facilitate the removal of existing adhesive films. Use our fluids to keep your jobsite clean

PROMOTIONAL TOOLS

Today's customers often know exactly what they want. But how do you convince your customer that you can offer them the best? That you have exactly what they need? Our support materials will help you do just that. For each specific topic, we have something that can help you with your sales or your presentation.

COVER STYL' TOOLS

Get the job done professionally with our range of Cover Styl' vinyl preparation and application tools. Our tools have been specially designed to offer you a precise and efficient job, allowing you to handle the vinyl easily without the risk of damaging it. In addition, our selection of tools will allow you to work faster, for a perfect result in no time.

SOTT® Backing - Paper Liner - Cutter

100-023

- Bigger Handle
- Powder coated pedestal to avoid sticking adhesive

Glides perfect between vinyl and paper liner. Foot is coated so it won't stick on the adhesive side. The handle is longer than conventional slitters and provides better grip.

SOTT® Vinyl Cutter

100-SOC

- Quick and easy cutting without damaging the substrate
- Fast cutting of film from a roll while it's still in the printer or cutting plotter.
- Fast cutting of film to size when it's already on the car.

This handy little knife is a 'must have' for every fast fitter. Not only that, this knife can do much more as it was originally intended for the opening and cutting of envelopes, paper, Cardboard boxes, etc.

You know the problem: the film is on the car - get your knife - blade out - cut the film - and then pray you haven't cut in to the paintwork..

There's a much easier and less stressful way. Just take your easy cutter and cut your films to size in one go, without fear of cutting in to the paintwork.

The secret is in the shape and construction of the easy cutter. It has a Plastic head with a flat underside and an angled stainless steel blade mounted on the inside of the head. The film runs between the top and underside of the head, so the blade can't possibly come in contact with the substrate.

It's also 100 % safe as the blade is concealed in the head. So having to slide the blade back in before putting the knife in your pocket or tool bag is a thing of the past.

The easy cutter is manufactured from durable plastic with rubber inlays
In short: a simple tool for quickly cutting film without a lot of hassle.

There is a 'sight' at the front that allows the cutting line to be followed accurately. Handy and clever.

This ergonomic hand grip with soft rubber inlay ensures a perfect grip allowing effortless cutting of both straight and more intricate cuts.

Built in blade

QUICK TIPS

ATTENTION: the blade cannot be replaced

Price per piece

EEZ Reach Cutter - Extra Long 70 cm **NEW**

100-LH70

- Super light
- Aluminium handle

Cutting wide 152 cm pieces of film on your cutting table in one go? This seems familiar to you?

With the Eez Reach Cutter, this is now a distant memory. The long handle allows you to cut through sheets of film or paper as large as 160 cm with one movement. Attached to the handle is a 70 cm long aluminium handle with a smooth head at the front, in which a super-sharp blade is placed.

The spoon at the bottom of the head slides easily over the cutting table without damaging it and ensures that the film goes over the spoon, into the head and is cut by the knife.

The easy cutter is manufactured from durable plastic with rubber inlays

In short: a simple tool for quickly cutting film without a lot of hassle.

Easily cut through 152+ cm in one go!

70 CM

- THE BLADE IS SECURELY POSITIONED IN THE HEAD
- SMOOTH CUTTING HEAD SO
- FILM OR PAPER DOES NOT
- STICK WHILE CUTTING
- LIGHT ALUMINIUM HANDLE
- THE KNIFE IS REPLACEABLE

NT® Cutter Designer Knife **NT Cutter**

100-D400

- Perfection in cutting with»the perfect touch«

This knife enables perfect curves and openings to be cut in the film without damaging the car paintwork or substrate as it allows more»feel«during cutting as the correct cutting pressure is easier to determine. Fits perfectly in the hand. The blades can not only be placed in the head in the straight, traditional way, but also in the»designers-way«.

Place the blade in the rear of the head to create an extremely sharp cutting angle for perfect uniform cuts. This art knife is manufactured from extremely durable plastic with a stainless steel head.

OLFA® SNAP IT 'N' TRAP IT™ Auto - Lock Utility Knife **OLFA**

100-DL-1

- With intergrated disposal container

With this knife, you can remove dull blade edges easily and safely. Simply slide the blade disposal container off the knife, insert the dull blade into the end of the container and snap it off. The old blade disappears into the container, and a sharp new blade is ready for use. Good For: Applications such as flooring, drywall and roofing repair or replacement. Cuts carpeting, linoleum, drywall, roofing shingles and more.

Price per piece

OLFA® 28 mm Perforation Cutter **OLFA**

100-PRC-3/C

- 28 mm serrated blade - Easy blade change

Perforation cutter from OLFA® with a 28 mm serrated blade. Due to the larger (28 mm) diameter of the deeper serrated steel blade, perforations can be cut very easily. Suitable for making folds in cardboard, tear-off strips and serrated edges in paper and foil. The perforation blade is optionally replaceable by a regular 28 mm rotary cutter.

Made of high-quality Japanese tungsten tool steel and designed for unmatched sharpness and superior edge retention. All OLFA® knives undergo an advanced manufacturing process where the micro-honed blade provides superior initial sharpness and edge retention, resulting in excellent sharpness and longevity.

Spare blade: 120-RB28-2 and 120-RB28-10 (for straight cuts)

28 mm

*suitable for cutting a range of materials like:
fabrics, textiles, cardboard, paper, leather*

OLFA® EXCEL BLACK™ - Ultra Sharp 12.5 mm**120-FWB SERIES**

- Wallpaper cutting blades
- Super thin: 0.25 mm

This OLFA® EXCEL BLACK™ 12.5 mm blade is the only blade in the world developed specifically for cutting wallpaper. It has been designed with a unique 65° angle, which was researched to be the ideal angle for cutting paper against a wall, and getting into corners. The ultra thin (0.25 mm) blades will cut even the wettest, pasted wallpaper without dragging or tearing, and more importantly, leave near enough invisible joints. Splicing two layers of wallpaper is a pain with other blades, but these ones make it effortless, and leave results that impress. The blade has 13 snap segments.

- SHARPEST POSSIBLE BLADE FOR CUTTING WALLPAPER
- ULTRA THIN FOR NEAR INVISIBLE JOINTS
- CUTS THROUGH WET, PASTED PAPER WITHOUT DRAGGING OR TEARING

mm

These replacement blades are designed for OLFA® rotary cutters. Made of tungsten tool steel, these blades offer unparalleled sharpness and superior edge retention.
Good For: cutting curves, sewing patterns and general cutting.
Cuts fabric, paper, film and more. Fits the original 18 mm rotary cutter (RTY-4).

Price per pack

OLFA® Stainless Steel Scraper Blades - for OLFA® Glass Scrapers

120-GSB-1S

x30

- Pack of 30 blades
- Sharpened on both sides
- 120 mm x 0,25 mm
- Also fits small scraper 300-GSR-2 (snap off system)

Stainless steel blade for the wide glass scraper 300-GSR-1 and the mini glass scraper 300-GSR-2. The special thing is that the knife consists of 3 segments that can be broken off from each other. So all of a sudden you have 3 blades for the mini scraper! Specifically designed for the toughest scraping jobs without scratching the glass surface. Double ground cutting edge for superior sharpness and durability. Removes with ease: paint, vinyl, silicone, glue, dirt from ceramic or glass cooktops, films and films, stickers, paint residue, varnish, all types of sealants, mortar, excess adhesives and grout, etc.

BLADE DISPOSAL CONTAINERS

SOTT® Snap - Off Blade Container

120-DB

- 25 mm Slot

This handy knife container is a must for any workshop. Simply and safely slide all old and used blades into this container. The container can be opened at the bottom to empty it. Store the container on your cutting table, in your Toolbox or in your Toolbag.

Another fact: the SOTT Tool bag (400-016S or 400-016LB) has a special pocket at the back to place the knife container. This way you always have a safe option within reach to store your used knife blades.

Price per piece

OLFA® Safety Blade Disposal Unit

120-DC-2

- Safely and easily dispose of used blades

The deluxe DC-2 blade disposal case features a metal slot to easily snap off extra heavy-duty HB blade. The lid can be opened and DC-2 can safely hold even 60mm rotary blades. The stored blades can be discarded separately and reused. Good for use at quilt working site.

Price per piece

OLFA® Safety Blade Disposal Can

120-DC-3

- For 9 & 18 mm snap-off blades

Enjoy one-touch blade disposal while working on projects. This OLFA® blade disposal can has a tambour door that's secure enough to stay shut, convenient enough to open when you're ready to use it. The pocket-sized can fits into a desk drawer, toolbox or workstation and is perfect for construction and industrial worksites, garages and sign shops.

Convenient canister design.

Price per piece

OLFA® Safety Blade Disposal Case

120-DC-4

- With loop hole for handy hanging

Safely dispose of used blades with this convenient blade case. Screw safe system prevents blades from falling out accidentally. Press-release operating system to ensure the blade slot is only exposed when in use. Loop hole and peg hole for hanging.

Easily fits in a back pocket, toolbox, or workstation, reusable.

Price per piece

OLFA® Blade Disposal Holster

120-DC-5

- Insert - snap off - get a fresh edge

Designed for quality-conscious professionals who snap off most frequently. The Blade Disposal Holster DC-5 features easy blade snapping in 2 blade positions and stores used segments while clipping on a tool bag, or a belt. Its compact size is perfect to carry around for one work day. Dispose used segments in bulk at the end of the day!

Price per piece

SCRAPING & CLEANING

Prepare the surface of your windows before applying the adhesive film with our selection of scraping and cleaning tools. Remove glue, paint and dirt residue with our professional scrappers and cloths.

The OLFA logo is displayed in a stylized, blocky font. The letters 'O', 'L', and 'F' are yellow, while the letter 'A' is black. They are all contained within a white rectangular border.

BLADE REPLACEMENT

Roll Dispenser

500-050

- Indispensable in every workshop

Metal dispenser for rolls of triple layer polishing paper (300-040). This handy dispenser holds a roll of polishing paper and allows individual sheets to be torn off across a black perforated guide at the top. The dispenser can be folded for easy transportation.

**QUICK TIPS**

Suitable for:

300-040

Price per piece

SOTT® Polishing Paper - Triple Layer

300-040

- 2 Rolls -37 cm (1'3'') wide

Industrial grade triple layer highly absorbent polishing paper. This paper is extremely strong and will not disintegrate when saturated with water. Soft but strong. Indispensable in every workshop.

**QUICK TIPS**

Suitable for:

500-050

Price per pack

This high quality compactly rolled polishing paper is extremely soft and so will not scratch the substrate.

Lowtack Tack Rags - On a Roll

300-023

- Removes all dust from any surface
- Leaves no residue

Slightly adhesive wipe on a roll . Ideal for removing all dust from any surfaces to be worked on. Removes dust from prints before laminating. Removes dust from windows and bodywork prior to film application. Removes dust from metal surfaces before painting or spraying. The roll is 30 cm (1'2'') wide and each roll consists of individual sheets that can be pulled off as required.

One side is slightly adhesive. Leaves no residue.

**QUICK TIPS**

Roll length: 36 m (62 sheets)

LowTack tack rags on a roll are the perfect solution for removing dust from a variety of surfaces. Individual perforated sheets.

Price per piece

Tack Cloth Dust - Fix

300-022

- 10 Pack

Slightly sticky cloth. Perfect for removing dirt and dust of window frames, cars or any area which has to be dust and dirt free before applying signs.Will not leave any residue behind. Creates an anti-static surface.

Price per pack

SOTT® Premium Microfiber Cloth - pack 5 pcs

300-029

Premium Microfiber 40 x 40 cm
- 500gr fine-textured
- 5 pieces in bag

Proper cleaning is essential for film assembly. Microfibre cloths are then indispensable. But which one is suitable?

This copper premium microfibre cloth immediately stands out from the competition when held in hand. The cloth's minuscule wavy structure scoops dirt from the surface, as it were, while moisture stays in the cloth. This combination ensures optimal cleaning.

Also, its smaller structure provides more coverage on the surface, so that every mm is cleaned.

**QUICK TIPS**

40 x 40 cm

Price per pack

LaPal Microfiber Cloth - Eco Sustainable - pack 5 pcs

300-045

- Made of recycled material
- 5 Pieces in box

These LaPal microfibre cloths (including packaging) are made of recycled material to reduce environmental impact. Thus, the cardboard packaging contains 5 pieces of microfibre cloths produced from 80% recycled polyester and 20% polyamide.

Not wanting to use unnecessary colour processes, the cloths are neutral white. This is also advantageous to the sign maker, window tinter, car wrapper and ppf installer. As a result, dirt residues are easily visible on the cloth when cleaning.

**QUICK TIPS**

The LaPal set consists of 5 cloths, each measuring 40 x 40 cm.

Beautifully stitched edges prevent lint

Produced from recycled material

5 pieces in box

Price per piece

Car Dash Cover - 76 x 180 cm

300-032

- XXL microfiber cloth

Whether you are installing or removing a window film, there is always a massive quantity of water around. Thanks to this XXL microfiber cloth, you can now cover and protect large areas such as dashes, or even in residential areas in which wood finishes would be endangered by water. It's also very useful for car wrapping or ppf installation, where you want to save time on drying the body paint after a quick detailing/cleaning.

**QUICK TIPS**

76 x 180 cm.

Price per piece

SOTT® Deep Cleaning Clay

300-049

- Kneadable clay for deep cleaning of car paintwork
- For use on car paintwork, glass, hard plastic, mirrors and metals

Anyone who thinks that car paintwork is really clean after washing and degreasing with a good cleaner will be disappointed. Bird droppings, tree sap, tar, road grime and fallout affect the paint and soak into the open structure of the paintwork. Thorough cleaning is then needed. This kneadable clay is made from petroleum resin to which a mild abrasive has been added. This breaks down stubborn dirt, which degreasers and cleaners cannot do.

Microscopically, car paint has an open structure in which dirt settles. This cannot be removed with regular agents or even a steam cleaner. SOTT Deep Cleaning CLAY is therefore an indispensable product for non-porous surfaces where self-adhesive film must adhere exceptionally well. These include edges, deep indentations and kinks. SOTT Deep Cleaning CLAY is used with water.

**QUICK TIPS**

Note: the colour of the clay may vary, but does not affect the quality

Price per p/set

- **Highly moisture absorbent, dust and lint free; won't tear**
- **Ideal for cleaning joints and other nooks and crannies.**
- **Indispensable for film fitters and car wrappers**

Ultra Clean white polishing cloths, often called surgical cloths, are manufactured from a micro fibre material and are completely lint and dust free. Not one single fibre is released during polishing. This enables the perfect cleaning of any surface. Extremely high moisture absorbency.

The all-round professional

Ultra Clean is so versatile it can truly be called an all-round professional. It can be used for cleaning electrical components, printer heads on industrial printing equipment, cleaning and degreasing windows and windscreens before the application of film. Also ideal for cleaning acrylate and rigid foam sheets, as well as for cleaning cars and other vehicles before applying film.

Inspection cloth: Ideal!

These cloths are also highly suited for cleaning and degreasing hard to access areas such as in gaps and joints on cars and other vehicles.

The amount of stubborn dirt that these cloths can still remove from joints, edges and gasps is simply amazing.

Good application is dependent on good adhesion. That goes without saying. Unfortunately, the cleaning and degreasing of the most critical areas get overlooked. These include joints, sills and gaps in bodywork. This is exactly where the film tends to come loose and curl.

FOR CLEANING:

- **PRINT HEAD STATIONS**
- **PRINTER COMPONENTS**
- **ELECTRICAL COMPONENTS**
- **ACRYLATE**
- **RIGID FOAM**
- **VULNERABLE SURFACES**
- **BISONYL**
- **PAINTED AND UN-PAINTED CARS**
- **GLASS WINDOWS AND FACADES**
- **DOOR SEALS AND FRAMES**
- **WINDSCREENS, INCLUDING THE DOT MATRIX**

Experience has taught us that these are critical places that are often overlooked during cleaning. That's just not possible when Ultra Clean cloths are used. If necessary, just wrap a cloth around one of our special squeegees. Apply a little SOTT Surface Cleaner-II (600-SC02) or Industrial Degreaser (600-T800) to the cloth and get in to those nooks and crannies.

The cloth will absorb the dirt which will be visible on the cloth itself. Only when the cloth stops absorbing dirt is the surface clean enough for the application of film.

Ultra Clean cloths are available in packs of 10 or 100.

Thorough cleaning of any joints or other awkward areas is essential for good film adhesion.

Simply take a squeegee and wrap a cloth around it. This will make the cleaning and degreasing of these hard-to-access areas a lot easier.

Ultra Clean cloths area ideal for checking to see if you have cleaned and degreased properly. These perfectly white cloths will soon show if any dirt is left in those awkward corners before you start application.

QUICK TIPS

Simply take a squeegee and wrap a cloth around it, this will allow you to clean and check all of those hard to access areas.

Price per pack

- **Grooved holder for perfect grip**
- **15 x 7 x 4,5 cm**

Very special, non-scratch scrub sponge . Perfectly cleaning any surface you want. Will not scratch the surface when the sponge is wet. Ideal for cleaning shop windows, glass, plastics etc. And it removes adhesive residues too!

The grooved holder improves the grip on the sponge.

Price per piece

- **22,5 x 15,5 x 1 cm**

Pro quality scourer Thin edition. Works very well for the removal of tough dirt and little bumps on car and home windows. The sponge is less than half an inch thick and fits nicely on the 300-035 SCRUBBER, so you can reach far corners and other hard-to-reach spots.

QUICK TIPS

Also useable on the:
SCRUBBER scrub pad squeegee

300-035 300-026

Price per piece

- **25,5 x 12 x 2,5 cm**

Large scrub pad for glass cleaning. Easy to use because of its size. Useful for the thorough cleaning of the »dot matrix« on car windows.

QUICK TIPS

Also useable on the:
SCRUBBER scrub pad squeegee

300-035 300-027

Price per piece

- **Soft and fine structure**

Special copper wipes for cleaning the dot matrix, often seen around the edge of windscreens. It is often quite difficult to get film to adhere between the dots. These copper wipes will polish the raster slightly and this will improve adhesion. Copper wipes should only be used on the dot matrix.

QUICK TIPS

CAUTION: NOT useable on tempered glass

Price per piece

- **Extracts dirt from the film pores**
- **Perfect for matte car wrap films**
- **Perfect for textured interior films**

This special white sponge, in combination with our Car Wrap Cleaner 600-CC44 cleaning spray is the perfect solution for cleaning matte self adhesive films like car wrap film* (especially matt). The sponge extracts all dirt released from imperfections in the film, returning it to its original colour. Rinse the film with water and job done!

NB: these sponges should not be compared with other conventional sponges as they are more susceptible to wear and tear. Copper wipes should only be used on the dot matrix.

QUICK TIPS

For best result, use:

600-CC44

*A detailed explanation of this process is included in Car Wrap Cleaner product 600-CC44.

Price per pack

The Scrubber Scouring Pad Squeegee300-035

Before film is applied the glass should be clean, degreased, and any hard specks of dust or dirt should be removed. However, it's not always easy to get to every part of the window. Perhaps the window is just too big, or perhaps you can't get behind a radiator or a cabinet, etc.

It's now a piece of cake! Just attach a scouring pad (see 300-026) to the Velcro on the SCRUBBER and use where necessary. The SCRUBBER is made of sturdy plastic allowing a good deal of pressure to be applied during cleaning.

Use on this squeegee:

The SCRUBBER is equipped with a strip of Velcro allowing the simple attachment of a scouring pad.

Price per piece

Cleaning Squeegee150-113

- For proper cleaning of the edges of window frames.
- 10 cm

Special squeegee for cleaning the edges of the glass at the window frame. The rubber is stiffer than ordinary squeegees and therefore the dirt can be pushed away better with the water.

OLFA® 120 mm Glass Scraper **OLFA**

300-GSR-1/3B

- 12 cm Wide - Extra flat for better cleaning

OLFA®'s special scraper makes it easy to remove paint, glue residue, stickers, glass paint and all kinds of dirt from glass surfaces. The thin design of the 300-GSR-1 allows it to go very low and flat over the glass. Ideal for use on wet surfaces, as the blade, mounting plate and screw are stainless steel. The blade is 0.25mm thick and ground on both sides.

By loosening the fixing screw and moving the metal plate, the worn blade can be easily removed. The cover of the blade can be slid onto the handle, giving you even more grip while scraping.

Soak It Up - Tint Rope 3 m

NEW

300-031

- Absorbs 4 times its own weight in water
- Does not lint

Indispensable when tinting car windows. To prevent water from running into seams and cracks, this moisture-absorbing braided rope is the way to go. Place the rope between the window and the rear shelf, between the door panels or between the dashboard and the windscreen. Water running down from the glass will be sucked up by the rope.

After the job is done, wring it out, let it dry and it's ready for another use.

The cover foil is 55 cm high; ideal for dashboards, parcel shelves, door panels, etc. Roll length 33 m

Soft without damaging the glass.
Strong water absorption.
Convenient storage.

Price per piece

Foldable Water Bucket

Soft Surface Scraper Mini **SCRAPERITE®**

300-006

- New type of holder for better grip
- 6 Scrapers included

Removing adhesive residue and hard bits of dirt from surfaces can be a problem. Scouring pads, blades and metal scrapers can cause scratches. That is why Scraperite's orange scrapers are a godsend. This small plastic holder has an orange polycarbonate razorblade and does not scratch.

You can use it on car paint, acrylic, hard foam, wood, glass, etc. A handy and indispensable scraper for every mechanic and should actually be available in every Tool Bag, Tool Box and Tool Station. In this way you can be sure that the cleaning, removal and scrubbing is done properly and without problems. Separate scrapers are also available.

The scraper has a sharp edge on both sides so that, for example, glue residue can be scraped up very easily. TIP: scrape it to one heap and scoop it onto your cleaning cloth. Repeat this procedure until all glue residues are gone.

The Wide Gripper - 10 cm - 4" **SCRAPERITE®**

- Extra wide
- Strong plastic grip - will not break
- Comfortable to hold
- With 1 or 5 blades

The big brother of the Scraperite family. This 4" (10 cm) wide scraper helps you tackle the toughest jobs by quickly removing adhesive residue, dirt, etc. from flat surfaces. The large polycarbonate scraper can be used on both sides and does not scratch surfaces. It's also easy to put in place and remove without fear of hurting yourself.

The Giant Gripper is entirely made of plastic, so it will never rust or oxidize. An indispensable tool for any signmaker, window tinter, painter or cleaner.

Scraperite Blades - Orange

RENEWED, THOUGHT OUT AND UNMATCHED

*ADHESIVE and DIRT removal
without causing any damage*

Scraperite is an american company that specializes in the removal of hand dirt, glue residue, hard obstacles, etc. from fragile and delicate surfaces. The blades are made of a special plastic mix and come in different sizes and shapes, so that an optimal result can be achieved without damaging the surface.

Scraperite ORANGE:

The Scraperite ORANGE is manufactured the softest material we offer and is a perfect tool for use on delicate surfaces. The orange version is made from Celcon and is approved by Boeing for use on Alclad aluminum airframes. Works great on painted and delicate surfaces.

Scraperite BLACK:

The SCRAPERITE BLACK is harder and intended for heavy-duty cleaning. This new, harder material is more resistant to breakage and wear. Designed for use in industrial applications where repeated use is normal. It also does a better job with more stubborn adhesives, sealants, oxidation, corrosion, etc. on less sensitive surfaces.

Scraperite Blades - Orange

300-009

x100

For use on the following substrates:
Acrylic, Brass, Ceramic tiles, signs, Glass, Formica, Hardwood, Laminate, Mirrors, Painted surfaces, Polycarbonate, Vinyl flooring, Windows, automotive paints, etc.

Scraperite Blades - Orange

300-009C

x30

The familiar Scraperite ORANGE but with special curved cutting edges. The curved scrapers are rounded on two sides for easier scraping. The scrapers are also slightly bendable so you can choose whether to press the scraper flat on the substrate or just the scraper edge. Also ideal for concave surfaces.

For use on the following substrates:
Acrylic, Brass, Ceramic tiles, signs, Glass, Formica, Hardwood, Laminate, Mirrors, Painted surfaces, Polycarbonate, Vinyl flooring, Windows, automotive paints, etc.

Fast Vinyl Removal

KEEP IT SIMPLE AND EASY! 2 SPECIAL ERASER DISKS FOR FAST AND EASY REMOVAL SOLUTIONS. NO STRESS, NO SMELLY ENVIRONMENT, NO WASTE OF TIME.

2 versions available:

Smooth Serrated

with 4000 rpm!

Strip - It™ Eraser Disk

300-010

Smooth

Fast removal of film and stickers

Removing vinyl of a car can be a difficult and time consuming job. Especially when the vinyl is old and tears easily. Or what to think of removing reflective vinyl.

Use the Strip-IT Disk to remove stickers, adhesive films, decals, labels, stripings, etc. from cars, boats, trucks, motorcycles, glass window panes, etc. Also ideal for removing adhesive residue.

Safe

The STRIP-IT Disk is safe and does not scratch or damage quality car paints and acrylic and urethane paints, glass, metal, etc. Do not use on soft, delicate or fresh paints or coatings.

- SPECIAL FORMULATED RUBBER
- SIZE: 90 X 15 MM
- RECOMMENDED SPEED: 3000 - 4000 RPM
- DRILL ADAPTER INCLUDED

Price per box

Strip - It™ Eraser Disk T - Series

300-010T

Serrated

Serrated for improved efficiency

For removing vinyl film, striping, stickers, decals, adhesive residue, double-sided tape or any other adhesive film. The special serrated edges keep the disk cool during use and enable easy handling.

Use the Strip-IT T-series to remove stickers, adhesive films, decals, labels, stripings, etc. from cars, boats, trucks, motorcycles, glass window panes, etc. Also ideal for removing adhesive residue.

Safe

The STRIP-IT T-Series is safe and does not scratch or damage quality car paints and acrylic and urethane paints, glass, metal, etc. Do not use on soft, delicate or fresh paints or coatings.

- SPECIAL FORMULATED RUBBER
- SIZE: 102 X 25,4 MM
- RECOMMENDED SPEED: 3000 - 4000 RPM
- DRILL ADAPTER INCLUDED

Price per box

QUICK TIPS

Instructions for use:
Use the adapter for mounting it on a drill. Set drill to the right speed (rpm). Exert light pressure and move the disk back and forth whilst erasing. Any remaining adhesive residue or deposits can be polished away with SOTT 600-Z0415 Right-Off Adhesive Remover or 600-T800 Industrial Degreaser. Test on a small area before you start erasing large areas.

CUTTING TOOLS

Simplify the cutting of your adhesive film with our range of cutting aids. Cut your media accurately and with no offsets, for a result that is synonymous with perfection.

SOTT

The Ultimate Cutting Ruler
Protects Your Fingers
Won't Slip During Cutting
Aluminium Cast Body

The Yellow 5 - Cutting Ruler SOTT

YELLOW-5

Anti-slip cutting ruler, indispensable for signmakers, window tint installers and interior film installers, that need to cut straight lines without the cutting ruler sliding all over the place.

A unique solid aluminium cutting ruler with all of the advantages that you could possibly wish for: strong, stable, straight, but above all safe. This allows you to make long cuts with ease, without the fear of the knife 'jumping' and running across your fingers. The workshop becomes safer and production is increased. Large sheets of film and thick, rigid materials can now be cut with ease.

The cutting ruler that CAN'T SLIP during cutting

The calibrations are clearly displayed in centimetres. This allows cuts to be made straight to size. The special antislipunderside ensures perfect stability on every surface, be it glass,

The special raised edge saves your fingers from being cut.

The thick anti-slip layer not only prevents slipping, but also protects your work from damage.

Aluminium cutting ruler with raised edge to protect fingers

acrylate, card, linoleum, rubber or anything else for that matter; the ruler remains perfectly still during cutting. The ideal tool for large colour prints and the like. The anti-slip foam layer prevents the ruler from coming in contact with your work preventing it from damage when the ruler is slid around. Very handy!

- CUTS SELF ADHESIVE FILMS
- CUTS POLYESTER WINDOW FILMS
- CUTS PLASTIC PANELS AND FOAM BOARDS
- MAKE SUPER STRAIGHT LINES

Available in 4 different lengths:

250-CB50	50 cm	Price per piece
250-CB100	100 cm	Price per piece
250-CB155	155 cm	Price per piece
250-CB200	200 cm	Price per piece

Handle for Yellow 5 Ruler SOTT

250-CB001

- Solid aluminium

Special 9 cm handle with double-sided adhesive, to be mounted on the ruler

Price per piece

- Define cutting lines before install ppf film
- Create a flexible ruler for cutting purposes

This 6mm (.25") plastic tape is a revelation for every installer. Easy to stretch and shape, does not leave adhesive residue.

Quite thick, so doesn't tear or break easily. Cutting and Contour Tape is ideal for:

Establish cutting lines:

If film needs to be cut to follow a desired form then Cutting and Contour Tape is the ideal solution. First apply the film, use the tape to create the desired form, and then simply cut carefully along the tape. The red and blue panel shown on the photo can be cut entirely freehand. The top of the full colour print that runs away slightly at the top can also be cut perfectly using the Cutting and Contour Tape.:

PPF bulk installation with cutting tape

Use this tape to place the correct cutting lines. Then install the PPF film as you normally would. Now cut through the ppf film, and on top of the cutting tape. Pull the cutting tape from under the ppf film while spraying water under the film. Result: nice cut and the paint is not touched.

QUICK TIPS

Size: 6 mm x 55 m

Price per roll

3M Knifeless Tape™

NO KNIFE. NO DAMAGE. NO WORRIES.

Removable Cutting tape that Easily CUT Film

Special removable tape with embedded cutting wire. Perfect tool to make clean cuts through digital print films, laminated films, car wraps, carbon- and other structured films when bonded to cars or other surfaces. Not suitable for stone chip resistant PU films.

3M® Knifeless Tape Finish Line 3M

350-206

Rotates easily in any direction with contours, curves and edges of the car. Accurately and efficiently cuts through selfadhesive film without the use of a knife and without surface damage, resulting in perfectly straight, smooth lines or curves.

- CUTS MOST VINYL WRAP FILMS.
- FOR APPLICATIONS WITH ONE OR MORE VINYL LAYERS

Price per roll

3M® Knifeless Tape Bridge Line 3M

350-207

This type of tape is wider and can therefore adhere to both sides of the body parts. This avoids the risk of cutting into the underlying rubbers, for example, or of the cut not being exactly in the middle.

- FOR CUTTING AT DOORS AND SEAMS
- FOR CUTTING LAMINATED PERFORATED WINDOW FILMS
- FOR APPLICATIONS WITH ONE OR MORE VINYL LAYERS

Price per roll

3M® Knifeless Tape Design Line 3M

350-208

Allows stretching, follows contours and turns easily in any direction. Excellent for creating designs & stripes with no extra steps required to achieve a perfect cut.

- STRETCHES SLIGHTLY AND TURNS EASILY IN ANY DIRECTION
- BEST OPTION FOR VERY TIGHT CURVES.
- TAPE CAN BE TORN BY HAND FOR FASTER APPLICATION.
- FOR SINGLE LAYER VINYL APPLICATIONS.

Price per roll

3M® Knifeless Tape Perf Line 3M

350-209

Easily cut an even margin between window graphics and window rubber.

- USED FOR CUTTING LAMINATED PERFORATED WINDOW FILMS (ONE-WAY VISION) AND CREATING A UNIFORM RELIEF CUT ALONG RUBBER MOLDS BEFORE APPLYING EDGE SEALING TAPE.

Price per roll

3M® Knifeless Tape Precision Line 3M

350-213

Accurately and efficiently cut through self-adhesive film without using a knife or damaging the surface, resulting in perfectlystraight, smooth lines or curves.

- CREATE A TIGHT, INVISIBLE SEAM BETWEEN TWO DIFFICULT TO WORK WITH FILMS.

Price per roll

Cutting Mat - Triple Layer

250 - SERIES

- 3 mm (120 mil) thick double layer calibrated cutting mat
- Available in black, green and transparent

High quality cutting mat which closes after every cut, preventing your knife from following previous cuts. These mats are triple layer enabling both sides to be used.

So they'll last twice as long!

*Makes
that perfect
cutting table*

Handy tip: Use a number of smaller mats on a large table - e.g. 2'x 3' (60x90) instead of one large mat. Experience has taught us that some areas of a table are used more often than others, so the mats wear out quicker in some places than others.

If you follow this advice you should only have to replace a single small mat instead of the whole table area. Simply attach the mat to the table with double sided tape. Never place warm or hot things (e.g. cups of coffee) on the cutting mat. This will cause permanent surface damage to the mat.

The mat has a solid core which ensures that it remains flat on the table without curling.

The calibrations on the upper side allow the accurate positioning of the film or cutting ruler.

Cutting tracks are eliminated ensuring every cut is perfect. Even cutting in the finest detail is possible.

OLFA® Cutting Mat Multi - Purpose Self - Healing Craft **OLFA**

250-CM SERIES

- One side shows cm, other side shows inches

CM series multi-purpose self-healing cutting mats are 2 mm thick and especially designed for use with OLFA® standard-duty cutters, heavy-duty cutters, art knives, rotary cutters and specialty cutters. Double-sided with green base color and white grid lines with a metric grid on one side and an inch grid on the other. Grid lines are designed for easy measuring and for accurate cutting of straight lines and precise angles.

Self-healing, an OLFA® original technology refers to the ability of the surface to return to its original shape after being cut and are ideal for general quilt cutting. A three-layer structure and soft cutting surface realize smooth cutting even after many years use. OLFA® CM mats protect your work area and greatly extend the life of your blades.

The Edge - Finisher ^{NEW}

- Clever mini rulers for perfect edge finishing

Skillfully marking, cutting and finishing edges and corners is not always an easy task. Especially when all edges and corners have to be uniform. With these clever guides, this is a piece of cake. Place the mini ruler in the desired corner or edge and make exactly parallel cuts or markings.

Perfect for measuring and cutting

Marking off with precision

This is handy: there is a 5 mm gauge on the flat strip and a hole every 5 mm. Place your pencil or marker there and then, draw a perfectly parallel mark.

Cutting perfectly parallel and straight

Next to the holes are slots to insert your knife. Now easily cut each film straight and parallel in a single movement.

SQUEEGEES

Get a perfect finish to for your adhesive film with our range of professional quality squeegees. Our squeegees provide a smooth, even finish by removing air bubbles and excess water.

MP Squeegee - Mulipurpose

150-CS10

- One corner is straight, the rest is rounded
- Including alcantara strip with sponge

The MP Multipurpose squeegee has a number of advantages over standard squeegees:

1: It is made of soft plastic and is therefore flexible. In addition, the light texture provides less friction during the squeegeeing process, so the film can not be easily damaged.

2: The MP Squeegee has a right angle on one side. Ideal for pressing film into corners.

3: The alcantara strip with sponge ensures that super high gloss films such as chrome or black will not be scratched during the squeegeeing process (make sure you wet the blade before you start). The sponge keeps the alcantara wet

4: On the side of the squeegee there are special openings where magnets can be placed, so the squeegee will stick to the body of the car when you want to put down the squeegee in order to have both hands free for a while.

10 cm width

Squeegee Grinder

350-210

- Is your squeegee burred?
- Is your squeegee no longer straight and smooth due to wear and tear?

A squeegee often is a personal favorite and an applier will always carry it with him. But what can you do when this particular squeegee has worn out so much, it's round and full of burrs? Keep it! Our Squeegee Sharpener is the solution to your problem! This smart tool has a small knife in its groove, fully smoothening the squeegee when pulled through. Smart and simple!

QUICK TIPS

Perfect for Smart PDLC (liquid Crystals) if you need to reduce the size by a few mm, without any damage unlike regular blade cut.

Price per piece

Rivet Brush

150-037

- 25 mm

25 mm brush for applying vinyl on surfaces with rivets. Also, very useable for applications with an embossed or structured surface.

Price per piece

Felt Squeegee

150-041

- Standard quality

Perfect to use for CarWrapping and applications of vinyls and films without applicationtape. Won't scratch the vinyl.

Besides its use on vinyl, this squeegee is also more and more used to shrink window tinting as it will always slide even if the surface is warm, unlike plastic card squeegee

SQ Squeegee - Straight Corners

150-SQ10

- Straight corners

Hard plastic squeegee with four straight corners instead of all common squeegees that have rounded corners. This can be helpful where one wants to be able to push film into corners. The edge is also thinner than conventional squeegees.

10 cm width

Price per piece

KEEPIN' IT SCRATCH-FREE AND SHINY

Wrapping pros all over the world use them: felt tips or sleeves that help your squeegee slide smoothly, called »buffers». But what is a good solution when installing high gloss films? And what about chrome and mirror films? Scratches do happen. SOTT has the solution: the WrapEdge, made of soft, structureless alcantara. Available in 4 types. These »buffers» do exactly what every installer and wrapper wants, because each type of WrapEdge has a preferred application.

HIGH GLOSS PVC FILM

Many installers have experienced that squeegeeing high gloss films (especially dark colours) causes scratches.

WrapEdge helps to avoid that! Because the middle layer absorbs and retains moisture, you can wet it with some soapy water and presto! the world's best squeegee is a fact.

Your squeegee suddenly slides perfectly over the vinyl while the pressure is evenly distributed and the film is superbly applied with no issues whatsoever.

MIRROR FILMS?

Chrome film, polyester film or mirrored film - they all have one thing in common: they easily scratch when you install them.

Wouldn't it be nice if you could simply squeegee them down and not have to worry about scratching?

VARIOUS THICKNESSES

The WrapEdge buffers have a sponge middle layer that serves 3 functions:

- 1: It holds moisture so it can contain the soapy water for wet squeegeeing.
- 2: Wet installing of window film becomes a breeze, because the sponge layer absorbs the squeezed-out moisture at the edge.
- 3: The thickness of this layer ensures an even pressure distribution when squeegeeing and flawlessly follows the channels and other recesses of the vehicle body parts when the film is pushed in.

The 4 different WrapEdge buffers are all made of high-quality, structure-free alcantara. The difference mainly lies in the moisture-absorbing middle layers, which perfectly serve as a moisture reservoir to prevent scratching when wet squeegeeing. The thicknesses differ from type to type. The special adhesive on the back is moisture-resistant

Thin and strong alcantara. Spreads the squeegeeing pressure evenly. Can be moistened for an even better result. Contains no sponge layer.

The buffers are slightly larger than a standard squeegee, so the squeegee edges don't scratch.

Available on a roll 2 cm x 2 mtr.

WrapEdge 00

Sturdy alcantara with a 1 mm sponge layer. Spreads the squeegeeing pressure ideally. Extremely suitable for chrome, high gloss, and polyester films.

The added 1 mm sponge layer makes the squeegee's edge rounder and distributes the pressure over its full width. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

WrapEdge 01

Sturdy alcantara with a 2 mm sponge layer. Spreads the squeegeeing pressure ideally. Extremely suitable for chrome, high gloss, and polyester films.

The added 2 mm sponge layer makes the squeegee edge thicker and rounder and distributes the pressure over its full width. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

WrapEdge 03

Sturdy alcantara with a 3 mm sponge layer. Perfect for wrapping in recesses and over swages as it can easily form the film in and over those areas.

The rounded edge of the squeegee is made thicker and is therefore very suitable for channels in company cars and vans. If necessary, wet the buffer to prevent scratches.

Available in sets of 12, pre-cut in 2 sheets.

WrapEdge 04

WrapEdge

The WrapEdge buffers are available in 4 different types, each one for a specific application. Check the back for more information.

WrapEdge-00	0 mm sponge thickness	500-037
WrapEdge-01	1 mm sponge thickness	500-038

PPF squeegees for the professional PPF installer

PAINT PROTECTION FILM (PPF) IS HOT THESE DAYS. BUT HOW DO YOU PROPERLY INSTALL THIS VERY SPECIAL AND EXPENSIVE FILM? GOOD TOOLS ARE HALF THE BATTLE. WITH THE FOLLOWING SQUEEGEES YOU HAVE EVERYTHING YOU NEED FOR A PERFECT INSTALLATION AND SATISFIED CUSTOMER.

SOTT® The Blue One Squeegee - Soft

150-PP1

- Soft and flexible

Small, very flexible rubber squeegee for the wet application of PU paintwork protection films on cars. This small squeegee follows every curvature of the car bodywork eliminating all application liquid simply and effectively.

Price per piece

3M® WetOrDry Rubber Squeegee - ULa Soft

150-PP2

- 7 cm x 10,5 cm

The squeegee is made of very soft rubber and follows literally any shape or contour of the surface. This squeegee is designed to wipe away the moisture under the PU film. Goes easily with any kind of bumper, bonnet or bumper strip. Because of the softness of the touch, the squeegee pressure is lower and it does not damage the film. The nice touch ensures an even drying process of the moisture and the film.

Price per piece

The Pink Shaved Squeegee

150-PP3

- 10 cm wide

The Pink Shaved squeegee is a must-have for every PPF installer! This squeegee is ideal to install polyurethane films on bonnets, roofs, mudguards and doors. Because the squeegee is medium stiff, but has a thin soft edge, it follows the contours of the surface with the right pressure, thus removing the moisture under the film. The squeegee tapers gradually at the edge, making it flexible.

Price per piece

The Small Shaped One - Soft but Firm

150-PP4

- 5 cm x 8 cm - Trapezium shape

This medium hard squeegee is ideal for convex and concave surfaces. Think of bumpers, mirrors, spoilers, headlights, etc. The trapezium shape allows you to use the squeegee on both sides. The sharp edge is very soft, so it follows every shape without problems and pulls the moisture out from under the film very easily and nicely. gradually at the edge, making it flexible.

The Knuckle - Handgrip For Turbo Squeegees

NEW

150-KN

Generate mega-power on your squeegee

WIN
every **BATTLE**
with window film

Turbo squeegees are known worldwide. Every window tinter uses them. But how do you put a lot of power on this squeegee? With the special handle called The Knuckle, this is no longer a problem.

Made of super-strong plastic, The Knuckle is shaped like a boxing stirrup and fits perfectly in the hand. Maximum power is hence guaranteed. Simply slide a turborakel into the clamp on the front and The Knuckle is ready for use."

Do anything with the Knuckle in your hand.

The great thing is that you don't have to put The Knuckle aside to free up your hands to pick something up. While you have The Knuckle in your hand, you can also pick up window film, peel off the protective sheet, spray the film, place the film, position it and then start squeegeeing with this Knuckle! All this while you still just had it in your hand. Bizarre but true. You just place your fingers through the eyes of the handle, and you have your hand free for use.

Choose which turbo squeegee you want to use in The Knuckle.

Slide a turbo squeegee into the slot.

Firm grip due to the shape of a punching bag.

Compatible with:

150-003

Price per piece

Softline Yellow Turbo - Big Tube Squeegee - 12.5 cm

150-003BT

- Better grip
- Shaped corners
- Harder than the Softline Turbo Squeegee

This Yellow Turbo BIG TUBE polyurethane squeegee is harder than the standard yellow versions and less flexible. The handle is bigger and gives you a better grip, allowing you to apply more force and pressure while squeegeeing. Specially designed for wet applications.

Price per piece

Softline Green Turbo Squeegee - 9 cm

150-004GR

- ultra soft and flexible; perfect for ppf installations
- shaped corners

The smaller brother of the 150-003GR. This green polyurethane squeegee is soft and fits well in hand. Specially designed for wet mounts. Because of its enormous flexibility it is very suitable for touching up smooth films and films like PPF (paint protection films), cast films, window films etc. especially on round, curved and arched shapes.

Price per piece

Softline Green Turbo Squeegee - 12.5 cm

150-003GR

- ultra soft and flexible; perfect for ppf installations
- shaped corners

This green polyurethane squeegee is soft and fits well in hand. Specially designed for wet mounts. Due to its enormous flexibility, it is ideally suited for touching up smooth films and films such as PPF (paint protection films), cast films, window films, etc. on especially round, curved and arched shapes.

SOFTLINE TURBO SQUEEGEES

A must-have squeegee made of PU. The PU edge is firm yet very soft when used during wet application. It follows every contour of the surface you're working on, squeezing out water from between the film and the surface.

Perfect for the first squeezes when positioning the film, followed by the more stronger BlueMax squeegee (150-007), Hybrid squeegees(150-048) or The Orange Crush squeegees (150-050). Different versions are available.

Softline Yellow Turbo Squeegee - 9 cm

150-004

- Shaped corners

The YELLOW TURBO squeegee has a white plastic tube that provides good grip. The PU blade is firm yet very soft when used during wet application. It follows every contour of the surface you're working on. Perfect for the first squeezes when positioning the film. The corners are shaped.

Width: 9 cm

Price per piece

Softline Yellow Turbo Squeegee - 14 cm

150-003

- Shaped corners

The YELLOW TURBO squeegee has a white plastic tube that provides good grip. The PU blade is firm yet very soft when used during wet application. It follows every contour of the surface you're working on. Perfect for the first squeezes when positioning the film. The corners are shaped.

Width: 14 cm

Price per piece

Softline Yellow Turbo Squeegee - 24 cm

150-002

- Straight corners

The YELLOW TURBO squeegee has a white plastic tube that provides good grip. The PU blade is firm yet very soft when used during wet application. It follows every contour of the surface you're working on. Perfect for the first squeezes when positioning the film. The corners are straight.

Width: 24 cm

Price per piece

Softline Yellow Turbo Squeegee - 48 cm

150-001

- Straight corners

The YELLOW TURBO squeegee has a white plastic tube that provides good grip. The PU blade is firm yet very soft when used during wet application. It follows every contour of the surface you're working on. Perfect for the first squeezes when positioning the film. The corners are straight.

Width: 48 cm.

Price per piece

- Entirely of plastic
- Flexible but sturdy arm
- Width 28 cm (11")
- Perfect for mounting etch films and window films on flat glass

PERFECT SQUEEGEE FOR WET MOUNTING OF SELF-ADHESIVE VINYL AND WINDOW FILM ON FLAT GLASS.
THE ARM AND HANDLE ARE VERY STURDY AND STRONG
BUT THE SQUEEGEE BLADE IS QUITE FLEXIBLE.

Price per piece

- Entirely of plastic
- Stainless window squeegee of the famous UNGER brand The best tool there is for cleaning flat glass windows to prepare them for film application. Also very useful for wiping away most of the water after you have placed the wet film on the glass.

QUICK TIPS

Compatible with:

300-RTU-20

300-RTU-20-S

Price per piece

- 130 mm wide
- Stainless steel handle from Unger, intended for the metal Unger glass squeegees. Fits all the Unger glass squeegees we offer. The back has four hooks that hold the rubber strip inside the squeegee.

QUICK TIPS

Compatible with:

300-RTU-20

Price per piece

The stainless-steel wiper from Unger contains a (replaceable) soft rubber blade. Simply clip an Unger handle to this wiper and you have a high-quality squeegee for wiping windows clean and dry when cleaning. You can also use the Unger squeegee to position window film directly when applying it and push out the first excess moisture from under the film.

Replaceable soft rubber blades for insertion into Unger stainless steel or aluminium wiper. Simply slide both in the Unger Hand Grip (150-017) and the rubber blade clamps into the wiper. Tip: turn your Unger into a power squeegee, by using a blue POWER MAX blade.

- Stainless steel frame
- Soft rubber blade

The Husler: The Ultimate 4 in 1 Squeegee SOTT

150-090

- Cleverly designed shape to reach everywhere
- A 4 in 1 squeegee

This cleverly shaped squeegee is a must for any installer. The different sides make it extremely practical to do various jobs with it. What can you do with this squeegee?.

The Hustler

THE 4 IN 1 TOOL FOR EVERY WRAPPER,
INTERIOR FILM INSTALLER & WINDOW TINTER

QUICK TIPS

1. You can easily push wrap film under rubbers of window frames or around roof racks without damaging the film.
2. Also perfect for use as a cleaning tool. Wrap a cloth around the squeegee and use it to easily get into any small narrow place that area. It can also be used as a cutting guide squeegee for window frames.
3. After the window film is installed, place the squeegee on the film, at the top of the corner and against the rubbers of the window frame. Put your knife against the squeegee and slide both down in one movement. Result is a perfect straight cut.
4. Because the squeegee is smooth and solid, it is also good to use when installing rigid films such as interior films. You can use the rounded side of the Hustler to guide and turn the film in a sharp corner without damaging the film.

Price per piece

The Green Wing SOTT

150-082

- Medium soft teflon, perfect for smooth squeegeeing
- Special angles and shapes

The Green Wing is an indispensable squeegee for any professional installer. The squeegee is made of medium soft Teflon and is pliable so it can be used on both flat, convex and concave surfaces. Due to the four different edges and angles, it is possible to get any type of self-adhesive film pushed into the most difficult places. The edges are not sharp so the film will not be damaged.

Automotive window film use:

This squeegee was actually developed to make it easier to push window film in cars behind the door strip and squeegee the moisture there. Thanks to the thin design and round shape, this is easy to do without damaging the window film.

Prepping car for wrap
Use the GREEN WING as a cleaning squeegee. Put your cleaning cloth around the squeegee and you can clean and degrease any small corner, kink or edge.

FOR INSTALLING OF:

- WINDOW FILMS (CARS AND BUILDINGS)
- CAR WRAPPING
- INTERIOR FILMS

Flat glass window film use:

Use the GREEN WING as a cutting guide squeegee for window frames. After the window film is installed, place the squeegee on the film, at the top of the corner and against the rubbers of the window frame. Put your knife against the squeegee and slide both down in one movement. Result is a perfect straight cut.

Price per piece

- Seamless
- Perfect fit
- Stretch

Seamless application glove, made of elastic material. The white material helps you to check whether the surface and/or the vinyl is clean. Because of the perfect fit it gives you the necessary feeling that you need during your application work, especially when you deal with curved surfaces on cars. The glove is made of dust free material, so even touching the adhesive of the vinyl will not cause any residue to be left behind.

Perfect fit for applying you signs smoothly

The clean and dust free fabric will help you to do professional and clean application

Completely seamless with a perfect fit.

Because of the perfect fit and thin material, you keep the necessary feeling in your fingertips.

QUICK
TIPS

Available in 3 sizes:

- Set of 5 pieces
- Ideal for pressing and guiding film in trenches
- Prevents cutting your fingers
- Cut resistance level 5

An alternative to a complete wrap glove.

"Wrapping gloves are now fully established. But why should the WHOLE hand be covered with fabric if you often only use your fingers to push the film into the channels and kinks? Also: using a glove to grip the film's adhesive layer is not always wise; fibers and dust can stick to the adhesive layer from the glove. And we don't want that.

Simply place the Little Willies on just a few fingers. Use these fingers to press on the film and the other to grip the film and adhesive layer. Pretty as it can be. Comes in one size; elastic fabric

Stick, wrap, install and cut without getting injured. This is possible with the Little Willies from SOTT as they are made of cut-resistant fabric and therefore meet the ASTM/ANSI test: Cut Level 5. So a quick cut on your fingers is not an option.

Price for 5 pieces

- Meets the ASTM/ANSI test: Cut level 5
- Smooth and tightly woven
- Set of 1 pair

Every installer knows the problem: accidentally cutting your hand or fingers. When large sheets of film, cardboard or plastic panels have to be cut, there is a risk of accidentally cutting your fingers. This can be avoided using the ANTI-CUT Glove. This glove is woven with a smooth fibre that prevents sharp objects from passing through it.

Another ideal application is to use when deforming window film on car windows. With its dense and smooth texture, the glove helps, positions and rubs away creases during heat-shrinking.

QUICK
TIPS

Level 5 Cut resistant:
what does it mean?

What does level 5 cut-resistant mean? It refers to a glove that has passed the ANSI test for level 5 protection, requiring 2,200 grams (2 kg) to cut the glove's material. So it's ideal for heavy cutting or cutting large areas!

- The solution for small corners, holes, seams and cracks
- Unbreakable material

Every mechanic knows it: mounting self-adhesive film in places that are hard to reach. The Factotum-II is a handy mini oval with two usable sides. It guides every film in the smallest corner or kink, without destroying the film while pressing. The smooth rounded corners give you the perfect opportunity to guide the film to where you want it.

Medium stiff and unbreakable.

For installing window film:

Easily install your window film between window rubbers, door frames, or in a corner between the rear shelf by using the Factotum-II to direct the film to your desired location.

For installing interior film:

Mounting these films is a precise job. Every edge, seam and kink has to be perfect. Especially in corners and around small objects it is nice when you can finish and press the edges with precision tools. This is what the Factotum-II is for.

For installing wrapping film:

Installing wrapping film between headlights, window frames, door handles and taillights is precision work. Small tools are a godsend. The Factotum-II gives you the possibility to guide the film in the corner and press it on places you normally cannot reach.

Price per piece

EZ Reach ULa Platinum - Medium150-070

The platinum version offers a hard card texture with internal lubrication technology that helps prevent point-of-contact scratching.

Price per piece

EZ Reach ULa Gold - Soft150-071

The EZ Reach Ultra gold version has a flex-firm rating that works wonders.

Price per piece

EZ Wing Lime - Soft150-074

Super soft and flexible but stiff in the middle. The EZ Wing has a slightly curved main edge. The curved edge is designed to enable the tool to encourage a finger or bubble to disperse outward, which reduces the likelihood of a crease.

Price per piece

Gold EZ Squeegee150-029

- Medium hard

Smooth and flexible squeegee, perfect for applying carwrap film and automotive windowfilm in hard to reach areas and corners. Medium hardness.

Price per piece

Triangle Reach Squeegee set of 3150-096

- 3 different hardnesses
- Rubber strip on the short side

Interesting and super handy. This set of three squeegees is an ideal solution for every car window film installer. The squeegees have different edges and therefore different functions. For example, the round tip is great for guiding window film around difficult corners and between tight-fitting rubbers or strips.

The short side has a rubber strip, which provides excellent pressure to repel moisture under the film. The shortened squeegee tip prevents the film from tearing at corners during squeegeeing. Set of 3 types

Rounded tip for guiding film

The shortened tip prevents the film from tearing

The rubber strip works well to repel moisture under the film

Blue = soft

Red = medium stiff

Black = rigid

Price per set

Platinum Silver EZ Squeegee150-028

- Soft

Same product as above but softer.

Price per piece

Teflon Yellow Squeegee150-027

Very soft and flexible Yellow Teflon squeegee. Perfect for use on large, curved windshields thanks to its 15 cm width. Won't scratch glass.

Price per piece

Diamond Tip Yellow150-030

An essential tool for applying vinyl in hard to reach areas, because of the special design and sharp edges of this squeegee. Won't scratch glass

Price per piece

Hau Tool Black Squeegee - Medium Hard150-084

Black plastic squeegee in parallelogram shape of German manufacture. This black version forms itself nicely to the shape of the surface while maintaining good pressure on the edge. Good to use as a squeegee for small narrow corners and slots but also for large surfaces. Does not scratch window films. The squeegee edges are 15 and 8 cm.

The light structure of the blade prevents it from slipping out of your hand when you work with moisture. The film does not stick to the squeegee either.

QUICK TIPS

The red version 150-085 is a bit softer and more flexible.

Price per piece

Hau Tool Red Squeegee - Medium Soft150-085

Red plastic squeegee in parallelogram shape of German manufacture. This red version is a bit softer than the black version and therefore it follows the shape of curved surfaces just a little bit easier. It can be used as a squeegee for small, narrow corners and slits as well as for large surfaces. Does not scratch window films. The squeegee edges are 15 and 8 cm. The light structure of the blade prevents it from slipping out of your hand when you work with moisture. The film does not stick to the squeegee either.

QUICK TIPS

The black version 150-084 is slightly stiffer.

Price per piece

The Plow150-011

Flexible squeegee for curved surfaces, such as windshields. Adapts itself to each surface.

Price per piece

The Red Devil150-013

Very thin (1 mm!) and flexible squeegee for positioning and applying windowfilm on side windows and for reaching sharply angled corners.

Price per piece

Grip-N-Glide Orange - Soft

150-068

15cm

- For paint protection, vinyl graphics and car wrap films

Power Stroke - 15 cm

150-005

15cm

- Flexible

An original handheld molded Squeegee, ergonomical designed to fit comfortably in your hand. It measures 15 cm from tip to tip, with a ridged grip area that fits your hand perfectly to reduce fatigue.

Price per piece

Little Foot Blue - Soft

150-072

15cm

- Soft

The Little Foot Blue fits comfortably in your hand, and features an angled, long-reach tip that gets behind gaskets and rubber seals quickly and easily. Measuring about 15 cm along the usable edge, Little Foot's pointed tip lets you squeegee in tight spaces while keeping a firm grip on the tool.

Price per piece

Little Foot Red - Medium

150-073

15cm

- Medium firm

The Little Foot Red fits comfortably in your hand, and features an angled, long-reach tip that gets behind gaskets and rubber seals quickly and easily. Measuring about 15 cm along the usable edge, Little Foot's pointed tip lets you squeegee in tight spaces while keeping a firm grip on the tool.

Price per piece

Black Edge Squeegee

150-019

15cm

- Medium firm

This flat rigid plastic squeegee has a black rubber medium hard blade to pull moisture out from under window films. The white body is thin but ergonomically shaped, so your fingers have enough grip to apply force.

Price per piece

The Slammer

150-010

15cm

Stiff, smooth plastic squeegee for automotive window films. This squeegee has been specially designed to deal with hard to reach areas, such as the glass surface under the rubber rim. The sturdy handle allows for a good grip. Won't scratch the window film.

Price per piece

The Edge

400-003

26cm

Stiff and smooth big squeegee to push back the rubbers in the door of cars. Makes tinting the windows of cars under the rubbers much easier.

Price per piece

Tail Fin Green - Soft

150-022

29cm

- Designed for installation behind brake lights - soft and flexible
- Softer than the yellow version

You know the problem: that third brake light at the bottom-center of the back window. This special tool is designed to make installing window film around the third brake light easier. It pushes out moisture -and keeps it out with pressure that holds down the edges behind that bothersome third brake light. It has an arched, curved body that gets behind the brake light to apply the constant pressure required to keep moisture from seeping back, thus allowing the adhesive to grab. Designed with two holes in the body of the tool for a better grip.

Price per piece

Tail Fin Green - Soft

150-023

29cm

- Designed for installation behind brake lights - soft and flexible
- Stiffer than the green version

You know the problem: that third brake light at the bottom-center of the back window. This special tool is designed to make installing window film around the third brake light easier. It pushes out moisture -and keeps it out with pressure that holds down the edges behind that bothersome third brake light. It has an arched, curved body that gets behind the brake light to apply the constant pressure required to keep moisture from seeping back, thus allowing the adhesive to grab. Yellow Reach Wing 43 cm *NEW*

150-083

- Especially for hard-to-reach areas
- Tough, flexible and unbreakable

We have all known the frustration of hidden spots or restricted areas where you could hardly squeegee the water out. The Yellow Reach Wing is a squeegee designed especially for window film, to apply the best possible pressure in small hard-to-reach areas. The slightly curved shape makes the squeegee sturdy and stable for applying pressure.

There are ridges on the bottom for better grip when the squeegee is wet. The grey rubber edges allow moisture under the window film to escape."

Price per piece

The Conquistador

150-008

Specially designed squeegee for the installation of windowfilm in hard to reach areas. It's ergonomic design is perfect for applying film in tight & sharp angled corners.

Price per piece

The Conquerer - The Original One

150-008S

Nothing beats the original Conquerer. This squeegee is the favorite per excellence with experienced car tinters because it is the tool of choice to mount window film nicely in the dot matrix (grids).

**QUICK TIPS**

What is the difference with the other versions?
The rubber strip on the squeegee does not melt at high temperatures.

Price per piece

The Titan

150-046

- ultimate versatility

This special squeegee solves the two main problems experienced during the application of window film on to convex rear windscreens and side windows.

- 

1. Its long, sturdy but flexible form makes it the perfect squeegee for applying film to very deep and low-lying rear windscreens.
- 

2. The profile variations at the back of the squeegee allows it to work the window film in to corners and between the window seals in a number of different ways.
Manufactured from sturdy, flexible and unbreakable plastic.

**QUICK TIPS**

Size: 38 cm x 8 cm

Price per piece

The Yellow Quickfoot

150-026

- Medium hard

Stiff, smooth plastic squeegee for applying automotive window films in hard to reach areas. This squeegee fits into a variety of differently angled corners, and its long narrow end is perfect for pushing back rubbers.

Price per piece

Quickfoot Blue - Soft

150-180

- Flexible

When you need a stiff squeegee with a handle for jobs that require medium reach, Quick Foot is the perfect»in-between»tool. Quick Foot is slim and trim like Slim Foot, but has a shorter, unwrapped handle so it fits more easily in your tool apron. This economically priced hybrid gives you a range of flex rating options to meet a variety of applications.

Price per piece

The Slimfoot

150-170

- Squeegee for hard to reach areas
- 36 cm long - 15 cm wide

THE SLIMFOOT: Special thin, long squeegee, for example for use with flat rear windows, when squeezing is difficult.

Price per piece

5 - Way Tool

150-035

Helper for holding window film adhesive film taut on windows at edges and corners during cutting. This grey version is made of soft pliable plastic and has rounded corners, so that the window film will not damage when slid or placed in a corner.

These are the 5 possibilities of using the 5-way tool:

A rounded short bevel that allows foil to be carefully pushed into a difficult corner.

A short bevel with a 10 cm long straight edge that enables this side to be so used as a regular squeegee.

A 90-degree angle, where the film can be cut directly on both edges.

A 26 cm straight edge that can be used as a cutting ruler and guide.

A large diagonal angle (80 degrees), so that one side can already be cut while on the other side the film may still need to be squeegeed to the edge.

- 1 Optimal pressure on the tip
- Ideal for difficult to reach places

The SIDE SWIPER is a unique squeegee designed for installing window films in difficult to reach places. Thanks to its special shape it has many advantages. Handle: This makes it easier to get your hand and squeegee into narrow and difficult places, such as sloping car rear windows. Your hand lies further behind the squeegee, which extends your reach.

Body: the body of the squeegee is made of sturdy plastic and allows you to apply force. The body is completely rounded and gets smaller to the tip, so it cannot damage the film. Rubber strip: the (replaceable) strip works like a squeegee and because of the considerable force you can put on the tip, it is very easy to push away all the remaining moisture at that spot.

Replacement blade:

Price per piece

BIG TURBO squeegees

With a larger diameter and black rubber strip, the Big Turbo is an ideal squeegee for quick installations of window films on glass in buildings. The larger tube lies better and firmer in your hand so that you can apply more force without in, or tiring your wrists. In short: a good addition to your toolbox.

Large diameter handle: 4 cm
Better grip in your hand so less fatigue while squeezing.

Big Mini Turbo Squeegee - 10 cm

150-113

- Width: 10 cm

This Big Turbo Squeegee has the same large diameter of the tube as all of his wider brothers. Due to its narrow width of 10cm, this squeegee is ideal for fitting in window film at the edges of rebates. This squeegee is also often used as a cleaning squeegee to pull away and remove any dirt in the water at the sides of the window.

10cm

Price per piece

Big Turbo Squeegee - 17 cm

150-112

- Width: 17 cm

The Big Turbo Squeegee is the squeegee to apply large areas in one go. The advantage of the Big Turbo squeegee is the larger diameter of the tube with which it is held. Therefore, you can apply more force without tiring your hand and wrist. The black rubber blade is medium stiff. On the sides of the tube are ridges for extra grip which prevent the tube from slipping and sliding in your hand.

17cm

Price per piece

Big Turbo Squeegee - 23 cm

150-111

- Width: 23 cm

The Big Turbo Squeegee is the ideal squeegee to apply large areas in one go. The advantage of the Big Turbo squeegee is the larger diameter of the tube with which it is held. Therefore, you can apply more force without tiring your hand and wrist. The black rubber blade is medium stiff. On the sides of the tube are ridges for extra grip which prevent the tube from sliding and slipping in your hand.

The Blue Max - 13 cm

150-007

- Soft but resilient

The Blue Max is the ultimate squeegee for wet applications, since no other squeegee can rival it for removing moisture under the film. Perfectly use for thick and stiff films, like safety films, solar windowfilms and laminated digital print films.

QUICK TIPS

Use with:

Price per piece

The Blue Max - 20 cm

NEW

150-091

- The big brother of the 13 cm version
- Soft yet hard-wearing

The Blue Max is the best-selling squeegee for wet application! This polyurethane squeegee effortlessly pushes or pulls the moisture under any film out. It is especially suitable for thick, hard and stiff films. Combined with the right grip, you have a perfect, durable squeegee for multiple applications."

QUICK TIPS

Use with:

Price per piece

The SOTT® Max - 13 cm SOTT

150-006

- Soft but resilient

The SOTT Max is by far one of the most important squeegees that a window tinter should have in his/her possession. Due to the combination of stiffness and flexibility, the squeegee gives an enormous pressure during squeegeeing, so moisture can often be pushed away at once. Especially for window films and safety films on flat glass.

QUICK TIPS

Use with:

Price per piece

The SOTT® Max Angle - 13 cm SOTT

150-006S

- 13 cm; trapezium shape

The SOTT MAX SHAPED corresponds to the standard SOTT MAX (150-042S) except for the shape on both sides. These run into a point, making it easier to push moisture away from edges and corners. Due to the combination of stiffness and flexibility, the squeegee gives an enormous pressure during squeegeeing, so moisture can often be pushed away in one go. Especially for hard window films and safety films on flat glass.

QUICK TIPS

Use with:

Price per piece

The Clear Max - 13 cm

150-012

- Softer than the Blue Max, but better for the rear windows.

The material used for the Clear Max is softer and so moves the moisture from beneath the film much more efficiently; especially when the surface is slightly uneven as with rear windscreen demisters or dot matrix raster.

QUICK TIPS

Use with:

Price per piece

The Orange Crush 130 - 13 cm

150-050

- 13 cm (5") wide; harder than the Blue Max

The Orange Crush is a polyurethane squeegee that is slightly stiffer than the Blue Max. This makes it the perfect all-rounder. This squeegee is ideal for removing moisture from beneath a variety of films including window film, polyester laminate, thick safety films and even films covered in application tape.

QUICK TIPS

Use with:

Price per piece

THE HYBRID - A multitalent: 2 Squeegees in One

- A multitalent: 2 squeegees in one
- Blue side: medium hard, orange side: soft
- In 2 widths available

This unique polyurethane squeegee consists of two layers, each with a different hardness. The orange side is softer than the blue side. The squeegee angles on either side are different as well, giving you full control over the right amount of pressure during installation.

13 cm wide

Woody Grip Squeegee - Ultimate Tool for Safety Films

150-054

- Wooden handle for 2 hands at the same time
- The Ultimate tool for Safety Films

The WOODY is a block squeegee where pressure can be applied with two hands at the same time. The advantage is that one does not have to squeegee over the same spot several times, as the pressure is so high that only one or two strokes are necessary. This squeegee makes working faster and therefore more efficient. This is indispensable if you need to apply window film to many large windows.

Now you can install safety window films thicker than 200 microns with ease without the risk of leaving a lot of water underneath.

Price per piece

High performance hand grips For more power

If you want a perfect installation of window films, these hand grips are your best friend. On this page you will find the small versions. Simply insert the desired squeegee into one of these hand grips and you're ready to get your job done!

Performax Hand Grip

150-014

13cm

Sturdy cast iron hand grip for use in conjunction with special soft squeegees. The Performax offers tremendous grip and allows extra pressure to be exerted on the squeegee during wet applications. Ideal for use on large areas of wet application such as self adhesive film on to acrylate and composite sheet materials, but especially suitable for window films and thick security film applications. The allen screws for attaching the squeegee are countersunk so they can not damage your work.

Price per piece

SOTT® - 5 Hand Grip SOTT

150-042S

13cm

Special handle, made of high-quality plastic, for clamping special squeegees. These handles have a better and longer grip, so they can be held securely without getting tired of squeegeeing. In addition, it is extra comfortable because the grip area is covered with a non-slip foam. Due to the curved shape and the special smooth plastic, the handle will not touch or damage the film when a lot of pressure is applied to it. This is the handle for soft squeegees, to squeeze films with the wet method. Particularly suitable for thick and hard films such as security films and window films.

Price per piece

SOTT® - 5 Short Grip Fandle - Extra Short SOTT

150-042SM

13cm

- Short handle: 8 cm

Same as 150-042S Hand Grip except shorter handle. This strong heavy-duty handle is ideal for use in small areas where space is limited. Often the handle is too long and you can't rake properly because the back piece gets stuck. With a handle length of only 8 cm, it does not stick out from under your hand and you can squeeze it perfectly in small spaces while still being able to use force to push moisture out from under the film. Made of strong nylon.

Price per piece

Fusion - 5 Hand Grip

150-042

13cm

FUSION hand grips offer an improved and extended grip reducing fatigue from squeegee work during those long applications. Extra comfort is provided by the anti-slip foam coating on the actual gripping area. The curved form of this special smooth plastic hand grip prevents it from coming in to contact with film when extra pressure is applied, so any risk of damage to your work is eliminated. This is the ultimate hand grip for squeegees used for the wet application of film. Perfect for use with thick and hard films, such as security film and window film.

Price per piece

QUICK TIPS

Perfectly combine with the following squeegees:

Short - 13 Hand Grip

150-039

- Rubber anti-slip handle

The SHORT-13 is an ideal handle for installing window films in environments where space is limited. Because the handle is only 10 cm short, it can easily be used in any angle and environment. Think of rear windows of cars, side rear windows in compact or hatchback models, etc. The rubber handle prevents slipping in situations when hands are wet.

The plastic squeegee is simply clamped into the jaws (note that it is not secured with screws). Intended for squeegees of 13 cm width.

Heavy Metal POWER HANDLE SQUEEGEES

Power Handles are ideal squeegees for the application of window films where extra pressure is needed during the pushing away of the moisture under the film. These squeegees are used especially for thick window films such as security films.

The metal frame provides stability and does not bend under pressure. The handle has small recesses so that wet hands still have a good grip on the handle. The replaceable nylon squeegee in the frame is medium stiff, available in different sizes and shapes.

Rubber grip with recesses avoids slipping when wet.

Strong curved metal neck for better angle.

Metal body holds the squeegee in place.

Power Handle - 15S + Shaped Squeegee - 15 cm

SMART TOOLS

Intelligent tools for precise and fast installation of adhesive film, even in the most complex installations. Thanks to our selection of innovative tools, you can apply your adhesive film with greater ease and efficiency, for a perfect result.

The Film Guider

150-100

- 2 Usable ends
- 2 Different-sized, rounded tips
- Metal guides

An ideal, nifty tool that helps install wrap films and window films in hard-to-reach places. With two metal rounded tips in different sizes. The hexagonal body in the size of a pen is ultra handy, enabling you to control the tips to place and guide the film into a particular spot. Durable plastic housing. Chrome-plated guides.

The Film Guider the perfect tool for wrapping

Price per piece

The Finisher SOTT

150-101

- Press down film in the smallest little areas
- 2 Different spoon positions
- Coated metal spoons

A must-have for every installer. This pen-style tool has two smooth metal spoons, each at a different angle. The spoons are flat to allow for film to be expertly pressed down in otherwise unreachable places. Think of corners of car hoods, between rear lights and headlights, around grilles and door handles.

The Finisher the solution for all holes and tight corners

- PRESS FILM UNDERNEATH RUBBERS OR WINDOW FRAMES, IN ANY HOLE OR CORNER.
- USEFUL IN ALL SITUATIONS.

Price per piece

SOTT® Wrap Tweezers SOTT

Handy tools for easy installation in hard to reach places

win the fight with small corners and seams

Each car wrapper and film installer knows: Pushing vinyl into small corners and cutting or wrapping around hard to reach areas can be quite a fight.

Specially designed for those tricky jobs are SOTT WRAP TWEEZERS. 3 different types of tweezers, each with its own purpose. Now you master every little part on the car. Made of stainless steel.

Wrap Tweezer I

350-311

- Flat round nose
- Pulls the vinyl without destroying it

The stainless steel Wrap Tweezer-I has a special flat round nose that can hold the vinyl without the risk of tearing it while pulling it around corners. Cut the vinyl to size, heat it up and guide the vinyl around corners using the rounded tips. You're done.

Price per piece

Wrap Tweezer II

350-310

- Curved end, with point
- Extra thin and precise

Stainless steel tweezers with curved ends. Both points are sharp and fit well together so that vinyl can be easily picked up within cracks, seams, headlights and taillights, etc. Whenever there isn't anything else that can be used to get the vinyl in deep crevices of the car, the Wrap Tweezer-II is the solution.

Price per piece

SOTT® Tweezer SOTT

350-201

- Round shape, flat inner surface
- Sharp point

This coated pair of tweezers has a sharp pointed nose that curves on the outside while being flat on the inside. Ideal because now you can keep your grip when handling the vinyl while the outside, due to its curved shape, doesn't stick to the vinyl.

Price per piece

A challenge for all film installers and sometimes (almost) impossible: placing and pressing down adhesive film into small corners, gaps and holes. Wouldn't it be great if there was a tool for that! Oh yes, SOTT sells it. A pair of elongated squeegees that work together as a team to tackle any job. Here they are: The Squad.

These specially shaped squeegees are designed to apply any type of film in hard-to-reach places. Whether it's for wrap film, window film or interior film, thanks to their various special tips these tools can literally be used anywhere and in any situation.

They are made of durable plastic so that they will not break, fray, buckle or curl easily. Several of the tips have sharp flat edges, to make it easier to push them into the smallest gaps. Despite this your film will not be damaged because the tip material is smooth and shows no burrs.

In short, a must-have for every installer who relies on fast and efficient work methods. Supplied as a set in its own case.

The smooth semicircular curved shape allows the installer to press down adhesive films behind seams and edges. Ideal for spots that normally would be out of reach.

The curved tip tapers off and is ideal for pushing film into corners and giving just that little bit of extra pressure to the rear side of edges, panels, doors etc.

Due to its smooth tapered shape, it is ideal for pushing all kinds of film into any conceivable shape without damaging it.

The Factotum II saw some improvements over version I. The tip tapers off and has a sharper edge. It is stiff, yet flexible. This allows a lot of force to be applied when pushing film into the smallest of channels and creases, but it won't break.

The tapered tail is quite stiff, yet flexible enough to push rubbers away from windows and other vehicle body parts. Because it is tapered and very smooth, it is a great tool for positioning window films before the water is squeegeed out from behind it.

This is useful too: use the rounded tip for scraping off adhesive and small pieces when removing film.

Price per set

- Wrap a mirror in the blink of an eye

This is a must-have for all wrappers! Every wrapper knows that wrapping a mirror is not that easy. If the film is not heated and stretched evenly, distortions, discolouration or glue streaks can occur. The Mirror Wrap Tool makes this all much easier.

How to use:

1. Stick the film over the arms of the Mirror Wrap Tool.
2. Heat the film evenly. And now push the mirror through the arms in one movement.
3. Voilà, the film is evenly stretched over the convexity of the mirror.
4. Now carefully remove the film from the arms and work the film near the edges of the mirror as you would.
5. Just post heat and you're done.

- **HARD AND STURDY PLYWOOD**
- **18 MM THICK**
- **LARGE HANDLE**
- **SMOOTH FINISH TOP AND BOTTOM**

Price per piece

- **Remove emblems without damaging them**
- **Aluminium handles**
- **Strong braided wire**

Every car wrapper and ppf installer knows this problem: emblems on the bodywork that need to be neatly removed without damaging them. This handy tool makes this easy. A strong thin wire between two aluminium handles cuts the glue between the bodywork and the emblem without being damaged. Place the wire at the beginning of an emblem, against the glue (foam), pull the wire tight and now pull it back and forth. The wire slowly and neatly cuts through the glue layer. If necessary, you may also heat the emblem a little to soften the glue.

QUICK TIPS

Comes in handy storage box. Includes 1 extra wire.

Price per piece

- **Turn your foil box into a cutting dispenser**
- **Cut your film directly from the box**

Small aluminum knife holder that is easy to place on the edge of the film box so you can cut your film to a specific width directly from the box.

TIP: tape the beginning of your film to a tube so that you have the same tension over the entire width when pulling up and cutting through.

QUICK TIPS

WE RECOMMEND these break-off blades are the best for this application:

How does it work?

1. Turn back the socket at the slot so that the slot is completely free.
2. Clamp a snap-off blade into the slot, sharp side down.
3. Tighten the socket so that the bolt clamps the break-off knife.
4. Now place the knife holder on the edge of the box, with the shear blade pointing inward, towards your foil inside the box.
5. Now pull your foil up a little and insert the foil through your knife blade.
6. Now gradually pull your foil up in one smooth motion, as far as you like.

Price per piece

- **Stainless steel**
- **Length: 17 cm and 23 cm**

Use this stainless steel hook to keep bonnets and tailgates of cars slightly open. Ideal for window tinters, car wrappers and PPF installers.

Now a bonnet or tailgate doesn't keep falling into the lock. Now the installer can easily reach the edges to finish the film

Now a bonnet or tailgate doesn't keep falling into the lock. Now the installer can easily reach the edges to finish the film

Price per piece

- Special domed point

This clever, pen-like gadget has a rounded tip, which makes it easier to peel films without damaging the liner or backing paper.

Price per piece

- With retractable needle
- Aluminium version
- Professional quality

The SOTT AIR RELEASE TOOL has the size of a pen and lies well in the hand thanks to its thickness and non-slip front.

The ultra thin and sharp needle gives you the ability to accurately and very locally prick away air bubbles. The needle is by means of an internal spring to pull so that this bubble piercer safely stored. The needle is not replaceable.

Price per piece

- Ballpoint model
- With retractable needle

Air release tool in ballpoint shape with razor-sharp needle inside. Simply click on the back and the needle comes out of the shaft.

Click again and the needle will retract. Ideal for film mounts where air bubbles have formed between the film and substrate. Delivered in luxury box. The needle is not replaceable.

Price per piece

- 0.45 mm thick
- Bevelled tip for invisible film penetration

By using this syringe together with the 350-220 syringe you have the solution to suck out moisture bubbles under paint protection films (PPF).

How does it work?

Pierce the needle horizontally in the bubble and suck the water into the syringe. Take the needle out of the vacuumed bubble and press the small hole closed with your thumb. Within a few hours, the hole will be invisible and 'healed'. Viola, your perfect assembly is ready!

Price per piece

The ultimate solution! A Must-have for every PPF installer!

Every PPF (paint protection) installer knows it: somewhere in the middle of the bonnet a big water bubble. What can you do about it? Pull off the complete film and start all over again? Not at all. You don't have to! Just use a syringe with an ultrathin needle to make an invisible hole and suck the moisture out of the bubble!

How does it work?

Pierce the needle horizontally in the bubble and suck the water into the syringe. Take the needle out of the vacuumed bubble and press the small hole closed with your thumb. Within a few hours, the hole will be invisible and 'healed'. Viola, your perfect assembly is ready!

INSTALLATION TOOLS

A complete range of intelligent tools designed to make the installation of adhesive film on glass surfaces quick and easy. Professional-grade tools for fast, accurate installation that will save you time on your projects.

- Define cutting lines before install ppf film
- Define working lines* on any vehicle
- Position lettering along a predetermined line
- Create a flexible ruler for cutting purposes

This 6 mm (25") plastic tape is a revelation for every fitter. Easy to stretch and shape, does not leave adhesive residue. Quite thick, so doesn't tear or break easily. Cutting and Contour Tape is ideal for:

Defining working lines:

Define working lines on curved or wedge shaped cars. This will create a fixed working line that will follow the form of the car. Use this line as a reference for positioning your sign to ensure that it is visually correct.

Establish cutting lines:

If film needs to be cut to follow a desired form then Cutting and Contour Tape is the ideal solution. First apply the film, use the tape to create the desired form, and then simply cut carefully along the tape. The red and blue panel shown on the photo can be cut entirely freehand. The top of the full colour print that runs away slightly at the top can also be cut perfectly using the Cutting and Contour Tape.

Defining working lines:

Defining simple working lines before starting the application of any lettering will enable the correct layout of text and logos. Tip: use fixed reference points, such as the corners and edges of doors and panels. This will simplify the layout of the opposite side of a vehicle as well as making any future repairs much more straightforward.

PPF bulk installation with cutting tape

Use this tape to place the correct cutting lines. Then install the PPF film as you normally would. Now cut through the ppf film, and on top of the cutting tape. Pull the cutting tape from under the ppf film while spraying water under the film. Result: nice cut and the paint is not touched.

Price per roll

Application and Positioning Tape - 50 mm

350-205

Do you need to layout text and large prints before final application? This industrial class tape is a hefty 5 cm (2") wide, has strong adhesion, but leaves no adhesive residue, even after several weeks. Not affected by water.

An ever-increasing number of bodywork components are being manufactured from composite materials. This is why you need Application and Positioning Tape.

QUICK TIPS
Size: 50 mm x 50 m

Price per roll

- Install film over rivets, in channels and on bricks in no time!

The well-known RollePro is the only tool that really works for installing film around rivets and applying wall films to brick or stone walls. The RollePro has a hard foam wheel that presses the film into and around curved or uneven surfaces. Install the film over the surface, warm it up and roll the RollePro over the shape or surface. Keep pressing firmly until the film has cooled off, then heatfix and you're done.

Warm up the film and roll RollePro simply over rivets channels, grooves or joints.

In this image you can see that the hard foam wheel easily takes the shape of the curved surface.

Even coarse bricks are no problem. The RollePro easily pushes the film into irregularities of stones, bricks and joints.

Price per piece

SOTT® Roller - Heavy Duty SOTT

150-201

- 150 mm (6") wide
- Top-heavy version; with bearings

Professional roller mounted in ball bearings and intended for intensive use. Top heavy means that the actual rubber roller is the heaviest part of the tool allowing extra pressure to be exerted during application procedures. This is especially evident during the application of large areas of film. Less pressure needs to be applied as the roller does most of the work.

IDEAL FOR:

- APPLYING LARGE AREAS OF FILM WITHOUT AIR CHANNEL TECHNOLOGY BUT SOLID ADHESIVE
- APPLYING APPLICATION TAPE
- APPLYING LAMINATE
- APPLYING HIGH TACK FILMS ON FLAT SUBSTRATES

The rubber roller is bearing mounted and so runs exceptionally true, offering highly efficient and effective rolling.

A good example of the use of the SOTT ROLLER: Covering large surfaces (such as a table) on your own with for example an interior film with a very strong adhesive can be a challenge. With a roller, it is very easy and hassle-free. The roller gradually presses the film onto the surface without tension or stretch, while a squeegee pushes the film away slightly. On large surfaces, this can then cause a little film tension. Not with the SOTT ROLLER!

Price per piece

Installation Roller

NEW

150-202

- Aluminium frame
- Medium soft rubber wheel

Special pressing roller for installation of films in channels and trenches in vehicle bodywork. The advantage of a roller over a squeegee or rubbing with a glove, is that the (heated) film does not poach. A roller pushes the film everywhere evenly into the trench without moving it.

Tiles is not an easy surface to cover, especially when you must conform the film inside the joins. Here is a tool that will help you out during this installation

INSTALLATION ROLLER
for channels and trenches in vehicles

Price per piece

it's bigger
it's stronger

it's **THE GOLIATH!**

All film installers and signmakers use them.
The mounting magnet. With larger pieces of vinyl, however, one magnet just isn't enough. We have something better for that task. An extra-strong magnet, with a special handle. It's a monster! We call it The Goliath!

SOTT® Goliath Magnet - Extra Large SOTT

150-MM883

super
strong
and no
mistake

Mounting Magnets are now indispensable when installing vinyl and other films. But we missed a satisfying solution for holding up large sheets of film with just one tool - frustrating! That is why we designed this special mounting magnet assembly and while we were at it made it multifunctional as well. Specially designed for the true installer who appreciates efficiency and convenience while he works.

MORE THAN 24 KG OF PULL!
REPLACES 4 ORDINARY MAGNETS
MULTIFUNCTIONAL!

The 5 advantages of the Goliath

EXTRA STRONG: MORE THAN 24 kg OF PULL!

There are 2 different attachments available that add a completely new function to The Goliath. In an instant create a third hand when working with the hot air gun or create a special rack for your squeegees and fluids*. Nothing is more annoying than magnets and film fall down whilst positioning. The standard magnets often turn out to have too low a magnetic force, which means you end up using several magnets to do the job. Thanks to The Goliath this is a thing of the past. The base contains 6 Neodymium magnets that together develop a minimum of 24 kg pulling force. The Goliath is so strong that one of them can hold up a 1,52 m x 5 m of film. So just clamp it down with The Goliath and start installing!

LIGHT GREY BASE FOR BETTER DIRT CONTROL

Avoid stains caused by your tool. The Goliath has a light grey rubber base that shows dirt well. By cleaning it regularly you can be sure that the magnet won't leave any dirt traces.

ROUNDED HANDLE: PREVENTS DAMAGE TO THE FILM

Often during installing the upper part of the film drops over the magnets, causing ugly kinks or folds in the film. The Goliath however, has a rounded top to prevent this.

10mm (0.4") HOLE FOR ADDITIONAL ACCESSORIES

Toward the top of the handle there is a 0.4»(10 mm) hole. This creates interesting possibilities for The Goliath. Available accessories are simply stuck into the hole, creating a whole new functionality for it.

Perfectly combine with:

150-MM885

Price per piece

SOTT® Dispenser SOTT

150-MM885

*Note: these accessories require 2 Goliaths.

Product information:
The SOTT Heat Gun Holder is made of durable black passivated metal so it's corrosion-protected.

Note, The SOTT Heat gun Holder only works with two magnets type:

150-MM883

- Your 3rd hand during installation

Materials and tools often clutter up the space around the vehicle during installation. What could be nicer than a handy bracket to hang your cloths and spray bottles? Installers often find they just haven't got enough hands for everything. A third hand would be so welcome. We have the solution for both problems.

CLEAN AND ORGANIZED WORK

Workshops usually look like this: rags and degreaser spray bottles everywhere and installers running around cars looking for them. Simply use the SOTT dispenser to keep all the articles off the floor, so that everything stays clean - plus you have everything within reach.

*YOUR 3RD HAND WHILST PRE-STRETCHING

The newest method to wrap small round shapes such as a door handles, antenna bases or mirrors, is to pre-stretch the film to stretch and then, during the installation, to heat-shrink it again. The SOTT Dispenser is your perfect assistant! Attach the film to the bar and you can heat and stretch it as much you like.

The SOTT Dispenser simply fits into the holes in the handles of The Goliath mounting magnets.

With a length of 60cm it is the ideal bar to pre-stretch the vinyl before you start wrapping, say, a mirror.

Hang your cloths, spray bottles, etc. on the SOTT Dispenser and your tools will stay clean and be at your fingertips.

Price per piece

Forget all the standard magnet

INTRODUCING the SOTT Magnet

SOTT® Mounting Magnet SOTT

150-MM882

Just about every signmaker, carwraper and film installer uses them. Mounting magnets. This handy tool keeps the sheet of film on the car body during positioning and installation. There are many types and shapes available, always with some kind of problem: too sharp, handle too small, the rubber rubs off or simply not powerful enough. Here is the SOLUTION:

A mounting magnet designed by people who really gave it some thought and that combines many advantages into one. Forget about the rest. From now you'll only want to use the SOTT mounting magnet.

THE MUSCLE MAN: More than 7,5 kg of PULL!

A common complaint of film installers is that mounting magnets often lack just that little extra in force. The SOTT mounting magnet solves that issue. The base contains 6 Neodymium magnets that combine into a magnetic force of over 7.5 kg. As a result, fewer magnets are needed in one place to keep the sheet in place, which won't fall readily off the car.

LIGHT GREY BASE FOR BETTER DIRT CONTROL

Avoid causing stains with your tool. The Magnetor has a light grey rubber base that clearly shows dirt settling on it. By cleaning it regularly you can be sure that the magnet won't leave any traces of dirt.

ROUNDED HANDLE: PREVENTS DAMAGE TO THE FILM

Often during installing the upper part of the sheet drops over the handles of the magnets, causing ugly kinks or folds in the film at the spots where it touches the handle. SOTT mounting magnets, however, has a rounded top to prevent this from happening.

QUICK TIPS

Order quantity per piece

Price per piece

Toolbag Mini

400-255

- 4 Storage compartments
- Belt included

This mini tool bag has a width of 13 cm and is ideal for installers who only need few a different tools for their installments. The tool bag has 3 compartments on the front and a hidden compartment on the back. On the front there is also a loop to attach a tape measure.

QUICK TIPS

Belt included

Price per piece

SOTT® Professional Toolbag SOTT

400-016S

- The most versatile toolbag available
- Belt not included

Professional installers often find themselves doing acrobatic feats to get to their tools whilst working. SOTT wants to respond to the needs of installer. So SOTT designed a special ToolBag which fully meets the requirements of professional installers across Europe. Behold the outcome.

MAGNETIC COMPARTMENTS

There are magnetic plates sewn into the material to conveniently stick your installing magnets.

BLADE STORAGE COMPARTMENT

No more old dull blades lying around! Put them into the special section in the 120-OLFA AB10 or 120-DB blade box. This box is specially made for this purpose.

SPECIALY DESIGNED KNIFE COMPARTMENTS

8 knife compartments with custom depths of 8 and 10 cm to make sure your knives always peek out a little. This way you can grab and return them quickly.

SAFE TAPE MEASURE HOLDER

The tape measure holder is made of sturdy plastic to avoid inadvertent damage when you lean against a car.

QUICK TIPS

Use with:

400-017S

400-022

MOUNTING TAPE HOLDER

On the bottom of the TOOLBAG there is a belt with a quick release. Attach your mounting tape there to quickly grab it when you need it.

PROTECTED AGAINST DAMAGE

SOTT's TOOLBAG is especially made of industrialgrade textile material and has an elliptical shape to reduce the change of scratching the vehicle.

STURDY PLASTIC STRAP

SOTT chose to use a sturdy, industrial-grade strap that doesn't bend or collapse when your TOOLBAG is filled with tools.

QUICK ACCES SQUEEGEE POCKETS

The TOOLBAG has 2 extra pockets with adjustable depths for squeegees that you want to grab without looking.

EXTRA MAGNETIC POCKET

On the front there is another magnetic pocket underneath the material to stick metal tools or screws. Ideal and very clever!

SPECIAL SHAPE

SOTT's TOOLBAG has one large compartment in the middle for gloves, wipes, etc. It has a special shape, so it doesn't bother you by wiggling between you and the vehicle. This reduces damage-prone situations.

Price per piece

special tool bar provides additional benefits

The famous SOTT Toolbag already has many qualities. The many pockets and compartments and the well-thought-out layout make this tool bag very popular throughout the World. But we've added some qualities.

Haven't used the SOTT Toolbag yet?
Now there are no excuses any more.

LONG ANTICIPATED

Toolbag owners may have wondered what those two elongated loops on the front are for. Well, now the cat's out of the (tool)bag: they are designed for holding a metal bar that slides into them, so your Toolbag becomes even more universal and can carry even more tools. This SOTT Toolbag bar is made of black passivated metal and is sized to allow for various tools to be hanging on it.

EASY FOR SPRAY BOTTLES

IDEAL FOR LARGE TOOLS

SQUEEGEES WITH GRIPS

BIG ENOUGH FOR BOTH

SOTT® Toolbag Bar SOTT

400-022

- Especially for large tools

To make the SOTT Toolbag (400-016S) even more complete, there is a special bar available that can carry large plastic squeegees, window squeegees, spray bottles, etc. Slide the bar into the two existing loops and done. The SOTT Toolbag bar is made of black passivated metal and thus resistant against rust and oxidation.

Price per piece

SOTT® Heavy Duty Belt SOTT

400-017S

Belt suitable for the SOTT Toolbag (400-016S)

Price per piece

SOTT® Toolbox SOTT

400-018S

- Everything you need, carried in 1 toolbox

A standard toolbox can't contain all the tools you need during a carwrap job. As always, you just don't have not enough compartments for your special knives and squeegees, bottles will topple over and so on. But not anymore! Now you can have the SOTT ToolBox.

bigger = better
up to 200 %
more space!

LARGER FORMAT: VOLUME 30 liter

With a slightly bigger footprint of 52 cm x 30 cm the SOTT TOOLBOX has a capacity of 30 liters. So you will have everything you need right by your side.

22 ATTACH STRAPS

Along the inside of the TOOLBOX are 22 tool straps for you to store your tools. They are designed for quick access, just as everything about this tool box is!

QUICK ACCESS POCKETS

Knives and pens are easily accessible for use on the front of the box and there is space for your mobile phone as well.

18 COMPARTMENTS

As many as 18 compartments on both sides for your squeegees, blade holders and many other tools and materials.

2 BOTTLE HOLDERS

The SOTT TOOLBOX comes with two additional bottle holders that can be attached to the TOOLBOX with Velcro. Now you can take up to 4 (Spray-) Bottles along without them toppling over.

RULER HOLDERS

As many as 4 sturdy straps with Velcro hold your longer tools, such as cutting rulers.

STAINLESS BRACE WITH HANDLE

Comfortable to carry thanks to the strong stainless brace with handle.

TAPE MEASURE HOLDER

On the back there is a strong metal clip for your tape measure. Everything is designed for quick access.

6 PLASTIC FEET

The box stands on 6 large plastic feet that avoid damage and soiling of the TOOLBOX when it sits on the floor and keeps it dry.

SHOULDER STRAP

Standard supplied with shoulder strap that can be attached to the special braces on the box.

Film Squeegee I

400-010

- Easily apply film in the most awkward of places

A handy tool for every professional fitter. For both car wrapping and window film applications. Using this thin smooth plastic spatula, film can be worked in to the smallest corner and the narrowest of gaps without fear of damaging the film. Film can now easily be applied to the bumper seams, rear lights or roof rubbers.

The special slender shape enables the application of film in to all manner of seams and joints.

Price per piece

Film Squeegee II

400-009

- Guide film between window and door seals, push in to joints

Film looks at its best when applied under the seals avoiding unsightly gaps. This handy tool is ideal for lifting the seals so that the film can easily be applied underneath. The Film Squeegee-2 is made of smooth plastic and is thin enough to avoid the seals being opened too much or getting damaged. This tool makes the application of film under door trims, window and roof seals a breeze.

The slender form of this tool enables seals to be lifted effortlessly.

Price per piece

Nylon Pushstick

400-001

Sturdy plastic spatula for pushing back or easing of rubbers around headlights and roof trims when applying film. Can also be used for positioning film in hard to access areas.

Price per piece

Doorgasket Puller

400-002

Easy tool for tinting of cars, to get the door rubbers in their proper place again, when they were pushed down while tinting the window.

Price per piece

The Factotum II

150-095

- The solution for small corners, holes, seams and cracks
- Unbreakable material

Every mechanic knows it: mounting self-adhesive film in places that are hard to reach. The Factotum-II is a handy mini oval with two usable sides. It guides every film in the smallest corner or kink, without destroying the film while pressing. The smooth rounded corners give you the perfect opportunity to guide the film to where you want it.

Medium stiff and unbreakable.

Price per piece

Film Opaquer - Fine Tip

400-012

- Damaged Film? Just repair it!
- Waterproof, black opaque, sticks perfectly on pvc, plastics, glass, etc.

For use with window film: Opaque black ink is great for repairing window film. Just touch up the 'open' area and from the outside the damaged area has disappeared.

For use with dark printed film: apply black to the edge of the film; this looks much better than the normal white edge.

Price per piece

Film Opaquer - Wide Tip

400-013

Same as 400-012 but with a broader tip.

Price per piece

China Marker - for Films

400-008

White wax pencil, for marking on films, glass, carpaints, etc. Easily wipe your mark away with water and a cloth or SOTT Surface Cleaner-II (600-SC02).

MARKS EASELY ON:

- PVC FILMS, PPF FILMS. POLYESTER FILMS, WINDOW FILMS, INTERIOR FILMS
- GLASS, STEEL, WOOD
- COATED SURFACES

Price per piece

SOTT Seal - It Pen

400-007

Here's a fast, simple answer to your edge sealing problems that require edge protection. The SOTT SEAL-IT PEN contains brand 4005 UV blocker acrylic clear, for a fast drying (15 minutes), long lasting edge seal. SOTT's SEAL-IT PEN is compatible with all type of films, simply follow the instructions that are included with each SEAL-IT PEN for your specific application.

Price per piece

Edge Sealing Tape - Black

400-011

- Roll size: 25 m x 15 mm
- For sealing the edges of window films and other films

EDGE SEALING TAPE is a good alternative when sealing the edges of window films with silicone sealant is not possible or desirable. This tape prevents corrosion, deterioration or loosening due to moisture or dirt getting under the film. Also good to use for sealing edges of print films, car wrap films, etc.

VERY LONG LIFE FOR OUTDOOR USE	CAST PVC FILM
CAN BE INSTALLED DRY	NO DISCOLORATION
HIGH PERMANENT ADHESION	

Price per piece

Edge Sealing Tape - Clear

400-011C

- Roll size: 25 m x 15 mm
- For sealing the edges pvc films, interior films and wrap films

EDGE SEALING TAPE Clear is specially designed for sealing and protecting the edges of films. The tape is virtually invisible and is applied dry over the edge of the film and the substrate. This seals the edge of the film and prevents it from coming loose and curling up. Also, no dirt or moisture can creep under the film.

VERY LONG LIFE FOR OUTDOOR USE	CAST PVC FILM
CAN BE INSTALLED DRY	NO YELLOWING
HIGH PERMANENT ADHESION

Workseat - with Gas Lift

400-019

- An end to backache!
- For easy movement around the car while applying your signs.
- No more tools lying around!

This is extremely convenient: a gas-lift work stool with a tool tray and castor wheels. The soft, comfortable upholstery keeps you comfortably seated even during lengthy jobs. Underneath the seat, a ring has been fitted with which you can operate the gas lift, adjusting the height to your exact preference.

The tool tray consists of three compartments for the tools you're working with, separated by a ridge.

The castor wheels include bearings and are made of hard plastic, with full rubber, durable and easy-rolling tyres. Very good adhesion to all types of substrates except granite. With one tube you can seal about 35 linear meters.

Price per piece

Window Tinting Light **NEW**

350-LL01

- 28 COB LED light with more than 3000 Lumenin full power mode
- 2200 Mah battery
- +3H of service + battery indicator level only 3H for full charge
- Self magnetic
- Key ring function

THE ULTIMATE light for window tinting ! Strong COB light which will help you during the cutting process, whatever tint your film has, and thanks to its 3 function modes and foldable stand, you will always get the right angle. Moreover, it has an internal battery with + 3 hours of service, perfectly useful when we all know the stress of finding an outlet for a regular working light station. easy-rolling tyres. Very good adhesion to all types of surfaces except granite. With one tube you can seal about 35 linear meters.

See by yourself the high brightness level!

Sealant DOWSIL 995 - High Impact

600-995

- **Extremely strong and resilient**
- **Also works as a bonding between film and glass/frame**
- **305 ml**
- **Colour: Black**

This odourless industrial sealant with high tensile strength is ideal for structural bonding between (safety) window films and glass. The sealant also seals particularly well against corrosion, leaks etc.

Great for bonding window films to the edges of the glass/frame in situations where break-ins, falls through or explosions are a possibility. With one tube, you can seal about 35 linear meters.

- Non-corrosive curing system. Fully dry and at strength after 20 days.
- Hardens into an extremely tough elastomeric rubber that ensures a durable, flexible, watertight bond.
- Excellent weather resistance and high resistance to ultraviolet radiations, heat and humidity, ozone and extreme temperatures.
- Excellent adhesion without primer to numerous surfaces including coated, tempered, and reflective glass and anodized, plastic or painted aluminum profiles including most fluoropolymer-based paints such as Kynar.

Price per piece

Sealant SILIRUB2 - Normal

600-752

- **Silicone sealant**
- **300 ml**
- **Colour: transparent**

High quality sealant for sealing window films' edges to prevent corrosion. UV resistant, long-lasting. Very good adhesion to all types of surfaces except granite. With one tube, you can seal about 35 linear meters.

Price per piece

Sealant SILIRUB2 - Silicone Sealant

600-753

- **Silicone sealant**
- **300 ml**
- **Colour: Black**

High quality sealant for sealing window films' edges to prevent corrosion. UV resistant, long-lasting. Very good adhesion to all types of surfaces except granite. With one tube, you can seal about 35 linear meters.

Price per piece

3M® Edge Sealer 3950

600-3950

- **For sealing the edges of PVC films**
- **0.23 L Container**

3M Edge Sealer 3950 is a clear varnish that provides a water and dirt tight seal between the edge of self-adhesive PVC films and the surface. It can also prevent edge curling.

Edge Sealer is resistant to water, mild acids and salts. Not resistant to hydraulic oils and greases. Edge Sealer can be removed with isopropanol alcohol and citrus-based cleaners.

- How to use:**
- Before you begin, test it out to make sure that the Edge Sealer does not affect the surface.
 - The surface and the film must both be degreased and clean.
 - Make sure that the film's edge is well pressed in accordance with the film manufacturer's guidelines.
 - Do not dilute.
 - Do not leave the lid off the jar for too long; this will reduce how long the contents can last
 - Apply the sealer with a 6mm thin brush in one smooth movement.
 - Make a 6-10mm seal edge, covering both the film and the surface.
 - Avoid gaps between the different seal edges.
 - Allow the seal edge to dry for 24 hours.

Price per piece

HEAT GUNS & MORE

Use thermal tools to control the heat and shaping of your materials. Thanks to their thermal performance, our tools allow you to control the heat and thus obtain a precise and uniform result. In addition, their ergonomic design and ease of handling make them comfortable and safe to use for long periods of time.

HEATMASTER2 Heat Gun - 2000 W

400-HM-2

- Perfect for sign makers
- Ideal for window tinters
- Indispensable for car wrappers

Indispensable for installers, essential for sign makers: a hot air gun to heat the film to stretch or shrink it into the desired shape. Every professional installer has one.

- specially for Steinel hot air tools

This heat-resistant guard cage is easily slid onto the hot air tool and helps prevent burns to both the user, as well as material burns. An ideal tool for car wrappers, window tinters and interior film fitters.

The protective cage is made of heat-resistant plastic and is assembled in no time. It can also be used in conjunction with the HL Scan temperature scanner. Can be attached to HG 2320 E, HG 2120 E, HL 2020 E, HL 1920 E and HL 1820 S hot air tools.

Price per piece

Post-heating on the right temperature?

TESTING is knowing!

Heat-setting the film after working it into channels and recesses is a necessity. Whether this is done with a hot air gun or torch, one question remains: how do you know if the film has acquired the right temperature?

The SOTT Infrared Meter measures it for you. Fast and simple. You simply aim the laser at the object you are heating up, and the gauge will immediately indicate the current temperature. Added to that you can keep the last temperature reading by releasing the front button. An ideal and indispensable tool for any signmaker, car wrapper or interior film installer who needs to know whether the right temperature of the film has been reached. Includes a 9 volt battery.

3 ADDITIONAL FUNCTION BUTTONS

Light button for display illumination.

Set to Celsius or Fahrenheit.

The laser pointer must be turned on and off manually.

TECHNICAL INFORMATION:

Distance spot ratio: 12:1	Backlight ON/OFF selectable Use one standard 9V battery (6F22)

QUICK TIPS INCLUDED: 9 Volt battery

Price per piece

- Reshaping or heat-setting is faster and has better results
- Heat-set the film in those awkward places without heating the adhesive layer and substrate

High quality gas burner - Sievert - Made in Sweden. Especially intended for working film and heat-setting in channels*. This burner produces tremendous heat allowing the correct film temperature to be achieved in a fraction of the time when compared with using a heat gun and a temperature gauge.

The main disadvantage with a heat gun (paint remover) is that it also heats both the bodywork and the adhesive layer. This is highly undesirable as this is also the removal temperature.

In short, a burner is the best solution for heat-setting film to all of those awkward areas.

Flame temperature: 1,925 °C!!!

The tip of the blue flame reaches 1,925 °C (3,500°F) and releases heat instantly. This is in direct contrast with a heat gun that supplies heat via an air stream. The burner is moved quickly over the film surface, so it only heats the upper layer. The lower layer and the adhesive layer remain unaffected by the heat and so do not melt. The film itself is heated to a casting temperature (more than 205 °C) in a fraction of a second, but cools instantly when the burner is removed.

- SMALL FLAME: 13 MM
- EXTREMELY SAFE IN USE
- CLICK-ON-CLICK-OFF
- HIGHLY ECONOMICAL; 80 CARS PER CARTRIDGE
- ELECTRONIC IGNITION NO ELECTRICAL POWER REQUIRED

Infrared Nozzle - No Air Displacement

400-BB-8708

- Does not blow hot air
- 1700w of direct radiant heat

Special attachment for the SIEVERT Cyclone gas burner. This attachment is special because it gives instant radiant heat from the flame inside it, without any blowing or air displacement. This lack of blowing ensures that your film does not get blown against bodywork as is often the case with hot air guns, or that surrounding areas of film are subjected to unnecessary heat. This infrared attachment provides instant radiant heat without affecting the flow of surrounding air. Manufactured from durable metal.

Solid construction in durable metal.

The flame from the burner is safely encased in the attachment so it cannot cause fires.

Price per piece

Simply Heat Up Corners and Fixate them together

The CORNERSEALER

Are there tools that can simplify film installation?
Yes, definitely! SOTT introduces a selection of
handy tools that no installer should go without.

Have you ever had small creases pop up at the corners of a wrap? Or small overlaps that lose their adhesion? This practical tool is intended for releasing the tension off installed film edges around corners. The CornerSealer allows you to melt small creases or curly film edges and close or flatten them.

Within seconds, the flat head gets hot enough to melt the film.

Simply push the hot flat head against the crease or overlap and 'melt' the film(s) together and/or in place.

This effectively fixes the edge of the film until it is tension-free in its new shape. The flat head allows you to melt small creases or curly film edges and close or flatten them.

HOW TO USE:
1. Make sure film is clean and degreased
2. Activate the device to preheat the flat head. This takes about 10-15 seconds (preheating time increases with deteriorating batteries).
ATTENTION! Head can get hot!
3. Avoid skin contact to prevent injury
4. Place the flat head against the film area and push down firmly
5. Avoid overheating! 1-3 seconds of pressing is usually sufficient

RFX Applicator for Application Tapes

500-017

Troubled by air bubbles or wrinkles when applying application tape to your film? Just use the RFX applicator. This handy little tool is 30cm wide and totally removes any creases or air bubbles between your application tape and film.

Price per piece

professional
ROLL SUPPORT

Simply and quickly slide the roll guide into the special position slots.

Perfectly finished endcaps smoothly slide into the position slots. This stabilizes the dispenser even more.

The dispenser comes complete with mounting brackets, screws and an Allen key. Just put it together and it's ready for use.

The dispenser comes complete with mounting brackets, screws and an Allen key. Just put it together and it's ready for use.

Corner brackets that can be mounted as needed so the dispenser «clamps» onto the table are included.

The two aluminium roller guides enable you to unroll your vinyl or application tape either from the top or the bottom.

The stable dispenser construction enables the perfect unrolling of wide film rolls, such as carwrap films, without any kinks or creases.

The roller guides are made from anodised aluminium with a metal profile along their entire length to prevent sagging

Rubber feet ensure it solidly sits on your table and they prevent damage. The dispenser can also be bolted to the table. A screw hole is provided for that purpose.

Has a perfect and safe finish thanks to its coated, solid metal build and rounded corners.

Chromed Wall Rack SOTT

500-012

16 rolls on
0,4 m² wall

- No more rolls toppling over
- Up to 16 rolls stored on one square metre
- Any roll up to 76 cm (2'6") wide

There is nothing worse than having your valuable stock of film being stood up somewhere in a corner. Result: rolls topple over, dirt, dust, no control, no order, so an increased risk of making mistakes.

This rack solves all of these problems in one go. This fully chrome wall rack can store 16 rolls on a slight angle to assist in roll selection. All rolls hang perfectly in their place and any colour and be selected from this rack at a glance. Manufactured from chromed steel complete with fixing brackets.

QUICK TIPS

Size: 55 x 70 x 18 cm

Floor Rack with Solid Ball Bearing Castors SOTT

500-013

16 rolls
on
0,5 m² floor

- Any rolls up to and including 152 cm (5')
- 16 Jumbo rolls stored on one square metre
- 16 Jumbo rolls in one place without any toppling over!

Every printing and cutting studio is familiar with this problem. Several rolls in one place, searching between the rolls while still trying to stop them all toppling over. The FLOOR RACK is the perfect solution.

The FLOOR RACK ensures that your jumbo rolls will never topple over again in your studio. The rolls can be easily moved on the rounded chrome holders and are automatically held upright.

Plastic discs ensure that the ends of the rolls remain flat, clean and undamaged. The entire system stands on 9 heavy-duty ball bearing castors, which allows the FLOOR RACK including rolls to be moved or manoeuvred as required. An absolute must for any studio wishing to improve efficiency and where space is at a premium.

9 SOLID CASTORS

The heavy-duty ball bearing castors allow the rack to be moved easily, even when full with rolls of film.

STORE ROLLS FAST

Fast and easy storage of rolls with no risk of damage

RIGID STEEL HOLDERS

Rounded chrome holder equipped with plastic disc ensure that rolls are stored perfectly, kept clean and remain undamaged.

Price per piece

The Filmcatcher SOTT

500-014

- No more grimy film
- No more wrinkled film

Keeping an eye on film when printing or cutting has always been a problem. How many times has your film left the machine and ended up a completely crumpled mess on the floor?

This need never happen again. Simply install the Film Catcher in front or behind your equipment and from then on the run of the film is perfectly controlled. The Film Catcher is a durable and sturdy chromed steel bar construction with a smooth finish. Friction between film, banners or canvas is kept to an absolute minimum.

No more dust and dirt

The rounded construction ensures that the film flows smoothly through the machine before being neatly collected. Creases often caused by the pure speed of the cutter plotter and the film ending up on the floor as a result are prevented.

No more dust and dirt

Nothing is worse than film or print work ending up on the floor covered in dirt, as it can ruin the whole job. The Film Catcher prevents your film or print work from ever landing on the floor again. One less thing to worry about! No minimum order.

The Film Catcher solves the crease and dirt problems at a stroke: Simply install and get cutting.

Front installation: The Film Catcher is the ideal solution for those printers not fitted with an automatic roll-up system. The film is neatly collected as it is printed.

Rear installation: When print work is removed from the printer there is always the risk that the end of the film will trail along the floor. The Film Catcher simply catches the end of the film before it has the chance to hit the floor

Price per piece

RESULT?

The curved construction of the Film Catcher ensures that the film flows smoothly and is kept away from the floor, preventing the film from becoming creased or dirty.

When a film is being cut it is pulled back and forth over the floor and dirt getting on to the film would normally be unavoidable.

The Filmhandler - Cutting Device for Window Film

The FILMHANDLER
cut window film perfectly straight
anywhere you like

Perfectly
STRAIGHT
and
ANGLED
CUTS

- Simple straight and angled cutting of window film
- The ideal solution for on-site cutting
- Cut 2 or 3 pieces at the same time, perfectly straight!
- Rigid aluminum frame

Cutting window film to size is not always easy. But with the Filmhandler, this is history. Simply place your roll of film between the holders and pull the film vertically down between the blade holders. Voilà, you have a perfectly straight cut.

Now fold down the special clamping bracket against the film and now cut your desired size horizontally against the guide. The clamping bracket ensures that the film does not fall to the ground. Now you can pull any piece you cut out from under the bracket without the rest falling. It is at a premium.

Lightweight; made of aluminium. Available in two sizes: for max 152 cm rolls and max 182 cm rolls.

The Filmhandler has 2 adjustable blades, so you can cut two or three jobs at once.

The roll holders are adjustable to any size.

Also, the roll holders have an adjustable braking system so the film won't accidentally unroll.

Size indication is in inches and cm.

Cut your window film vertically perfectly straight to your desired size.

Along the horizontal guide, cut the film to size.

Hang the Filmhandler on the wall or place it on a stand or stairs.

THE FIRST UNIQUE SPRAY BOTTLE DEVELOPED BY SOTT AND HOZELOCK

- HEAVY-DUTY COMPONENTS
- BUILDS UP INCREDIBLE PRESSURE
- 1,25 LTR (42.3 OZ) CONTAINER
- UNBREAKABLE HARD SHELL CONTAINER

Easy to read icons, specially designed for the professional industry.

How-to-use instructions are printed on the container.

Indication in two measurement units.

Adjustable spray head for fine-tuning.

Heavy-duty pump handle.

A must-have for every installer
in the Signage, PPF,
and Window film industry.

SOTT® Pressure Spraybottle - HOZELOCK - 1.25 L SOTT

550-4075

High quality pressure sprayer with 1250 ml contence, for the moisturizing of surfaces and film. Not to be used for aggressive liquids or degreasers. In these cases use the SprayMaster (550-110).
For more info, read the ad-page.

Price per piece

SOTT® Pressure Sprayer - HOZELOCK - 7 L SOTT

550-4007

Large pressure sprayer (7 l) with a 5 litre liquid capacity. The large reservoir is easily pressurized, and the long hose and special trigger allow you to spray large surfaces prior to applying window film. In other words: you can simply carry on with the job in hand without having to walk back and forth to the tap. The wrist cramp that often results from holding the trigger of ordinary sprayer bottles is a thing of the past as well.

The spray head (A) can be set for the amount of spray mist needed, and the pressure can be adjusted by A B turning a button (B) next to the handle.

Price per piece

The Spraymaster - The Ultimate Sprayer

550-110

- is not affected by chemicals, degreasers, cleaners, adhesive removers, acids or aggressive liquids!
You've never seen a sprayer like this! The Spray Master releases a powerful mist instead of just beads of moisture. With a range of up to 3 metres! The Spray Master has an enormous spread of spray and covers the entire surface with a 'cloud'. This mist is much finer than the beads of moisture normally associated with other sprayers. The turbulent spraying action not only ensures that the surface is more efficiently sprayed, but the resulting mist also 'pulls' any dust that happens to be swirling around out of the ambient air.

Do not hold the SprayMaster upside down; the trigger may leak.
IMPORTANT: The SprayMaster is not long-lasting resistant to screen-print ink cleaners and Right-Off adhesive remover (600-Z0415). After several weeks, the trigger may start to leak.

The remaining liquid content is displayed on the side of the bottle.

One of the biggest advantages of the Spray Master is the turbulent mist that it creates. This not only achieves a greater range of spray, but also removes dust particles from the atmosphere.

The sprayer of the Spray Master is especially developed to supply a high yield of spray per pump action. The Spray Master is also resistant to aggressive substances.

Price per piece

THE ULTIMATE HIGH PRESSURE SPRAYER IS HERE

SOAK'EM ALL

• 12 UNIQUE FEATURES • 8.3 m REINFORCED HOSE • MADE IN EUROPE

SOTT® Waterbomb High Pressure Sprayer SOTT

550-WB10

- A must-have for any installer who wants to work quickly and efficiently

The SOTT WATERBOMB is the ULTIMATE high-pressure sprayer and is for every window film and PPF installer. No more messing around with small pressure sprayers that waste time needing to be re-inflated all the time.

The WATERBOMB can be pumped up to 6 bar with a hand pump or with a compressor giving you perfect pressure to spray the moisture on to your film or surface for the whole of your working day.

The barometer indicates how much pressure you have left in your tank. The inner casing is made of coated steel which will not rust and is not sensitive to chemicals and acids. The SOAK'EM trigger is compact and easy to handle which makes it easy to use in small spaces. The special ultra-flexible hose is reinforced on the inside so that kinking, flattening or being run over is not a problem.

Storage compartment

Special storage compartment for small loose parts.

Extra large filling opening

Quick filling is easy with the large filling opening.

Heavy duty pump

Very strong brass pump with heavy duty metal handle.

2 adjustable straps

The two adjustable straps give you the option of carrying the tank on your back.

Compressor connection

Awesome! Pump up in the morning and all day sufficient pressure!

SOAK 'EM nozzle

The SOAK'EM trigger made of durable plastic. The pressure can be regulated via the nozzle. The trigger is also lockable.

Integrated pressure gauge

Quickly and easily read the tank pressure on the built-in pressure gauge.

Rotatable connection

Unique: the connection between the nozzle and hose can be rotated without the hose rotating.

Blow-off/safety valve

Just press the button and all pressure is off the tank.

Flexible heavy-duty hose

This flexible soft hose of no less than 8.3 m, is internally reinforced and can withstand a pressure of 15 bar.

Large foot + extra stability

The large foot stand ensures that the Water Bomb does not easily fall over during use.

Bottom connection

Because the hose connection is at the bottom, no residual liquid remains in the tank and again, it will not easily fall over.

AVAILABLE SEPARATELY:

- No more unsightly curled up pieces of tape

It's always been a problem: securing your rolls of film after use. Usually they are just taped up, but this often means that when the tape is removed the film gets damaged. Not anymore!

Just use the Speed Clip.

This clip is made from a soft flexible plastic with a special finger recess allowing you to simply slide it along the roll without damaging the film. The clip then closes securely around the film holding the roll together.

Eliminates the chaos of unsightly taping

The Speed Clip ensures order and a clear view of your stock. It can be used on all types of film.

When the clip is removed, the film remains totally undamaged, but the Speed Clip does much more. Here are a few examples.

*Keep your
ROLLS TIDY
and in an
ORDERLY
fashion*

Handy finger grip

Flexible and self-closing

Rounded ends

Automatic spacing

Leaves no impression on the film

Suitable for window film

Can be used on thick rolls

Ideal for laminates

Space for logo or company name

QUICK TIPS

After intensive use Speed Clips may develop some "play". No problem. Just place the Speed Clip in some hot water, and after a short time it will return to its original shape.

LIQUIDS REMOVAL

Right-Off - Adhesive Remover SOTT

- Removes adhesive residue in 2 minutes
- Also removes tar, grease, chewing gum, paint, etc.
- Harmless to all substrates

Right-Off will not only remove adhesive residue from self adhesive film and window film in less than 120 seconds, but also tar, grease, lubricants, chewing gum, etc. from carpets, upholstery and from plastic, Perspex, Beauty Board, rigid foam, metal, bisonyl, banners and painted surfaces. pH neutral, harmless to substrates and is not classed as a hazardous substance. Suitable for use on all types of film.

Instruction for use:

1. Apply Right-Off to the surface and wait for 60-90 seconds.
2. Using a Lil' Gripper scraper (300-006) scrape the resulting residue into one place.
3. Collect the residue using polishing paper (300-040). Repeat the procedure until all adhesive residue has been removed. Apply additional Right-Off as required
4. Thoroughly clean and degrease the treated surface with Surface Cleaner-II (600-SC02) before drying with a clean cloth.

Film Remover SOTT

600-TRL1000

- Removes self-adhesive pvc films from automotive paints, wood, expanded-foam boards, decor panels, glass and metal.
- 5 ltr

600-TRL1000 is a thick, gel-like liquid that is applied with a brush to self-adhesive films that are to be removed. Wait a few minutes and the film will begin to separate itself from the surface. Repeat if necessary. Works on cast, polymer and monomeric films.

Not suitable for multi-layered films such as retro-reflective films and laminated films. Do not use on soft fragile substrates such as plastic, rigid foam, banners, tarps, acrylics, acryl paint, etc.

Read the instructions on the package carefully. First, test on a small area to see if the product meets your needs.

Price per piece

Industrial Degreaser - Silicone Cleaner SOTT

- Harmless for car paints
- Removes silicone, grease, tar, oil, adhesive, paraffin and car importer's wax

A unique balanced product that was especially commissioned and developed some 20 years ago for use in the metal fabrication, automotive and advertising industries. Used extensively in the metal fabrication industry for degreasing prior to chroming or galvanizing. SO THIS IS A REAL DEGREASER!

T-800 Removes underbody coating, car importer's wax, paraffin, grease, silicone, etc. from all surfaces. It will even degrease through water. So having to dry a car before degreasing following a shower of rain is a thing of the past. Just apply with a cloth, wait a few minutes, and then just wipe over with a dry cotton cloth. T-800 needs to be removed with a cloth because it is somewhat slower than the volatile thinners. There's a good reason for this; for it to make grease molecules 'float' it has to first get under the molecules. So when the surface is wiped with a dry cloth, the end result is a perfectly degreased surface.

Suitable for car paints, metal, aluminium, Beauty Board, etc.
Not suitable for use on rigid foam, polystyrene, etc.

Every colour is accompanied by a RAL number, giving you all the information you need to make the correct colour choice.

QUICK TIPS

For installing PPF films, we recommend a 2-stage cleaning system. Step 1 is SOTT SurfaceCleaner 600-SC02. Step 2 is Industrial Degreaser 600-T800.

Silicon - Wax Remover

600-T900

- The best solution for removing stubborn wax

Durable surfaces such as car paint are often treated with a protective layer. The most conventional way to do this is to use a silicone-based wax. Since silicone has a repellent effect, this is ideal to prevent dirt. However, self-adhesive materials such as stickers, strips and wrap films will also no longer be able to adhere.

To be able to do this, the wax must be removed. SOTT 600-T900 Industrial Silicon & Wax Remover ensures that the wax becomes soft and dissolves, so that it can then be removed with a soft cloth.

How to use:

1. Wash the vehicle or substrate thoroughly so that all the (street) dirt is gone.
2. Make sure the surface to be treated is dry.
3. Apply SOTT 600-T900 Silicone & Wax Remover with the SOTT 300-040 3-layer cleaning paper. This is how you do it: make a wad of paper in your hand and pour SOTT 600-T900 Silicone & Wax Remover on the cleaning paper.
4. Now polish the treatment surface thoroughly and with circular overlapping movements with your cloth. Do this thoroughly and let it soak in for a few minutes.
5. It is possible that the surface will show a white haze. This is normal. This means that the wax becomes soft and begins to dissolve.
6. Now use the SOTT 300-021 UltraClean cloth, also wet it with SOTT 600-T900 Silicone & Wax Remover and polish the surface in circular movements.
7. If the white haze (if visible) disappears during brushing with 600-T900, then the silicone and/or wax has disappeared.
8. Always polish again with a new dry cloth 300-021 or cotton/microfiber cloth.
9. Allow the surface to wash out for 10-20 minutes before you start foil mounting.

PPF film

QUICK TIPS

Please read the instructions carefully before use.

T-900 is the perfect product to remove all types of auto wax, often used on tuning- or high-end cars.

Spray-N-Gone SOTT

- Removes glue from window films with two fingers in your nose
- Does not affect substrates, rubbers, rebates and interior parts
- Biodegradable

A worldwide headache cause is the removal of solar window film. And we mean especially the adhesive layer. Since the adhesive applied to such polyester films is different from conventional PVC films, it often sticks hard to glass. The film itself comes off the adhesive, and so the adhesive remains on the glass. On car windshields it is then completely invisible nestled into the grids, and on flat windows you have huge surfaces to strip of the hard adhesive layer. Very tedious work.

Removing adhesive from window film is often a difficult job. Aggressive liquids and sharp metal scrapers are regularly used to get the glass completely clean again. From now on, that won't be necessary.

The
30 second
adhesive
REMOVER
for WINDOW
FILM

The SOTT Spray-N-Gone window film adhesive remover is the solution for this. It simply and easily dissolves the adhesive within a few minutes. The adhesive softens and can be easily removed. Afterwards, SOTT Spray-N-Gone works as a perfect surface cleaner to leave the substrate completely 100 % clean. Does not affect anything. Completely harmless to the environment.

Instructions for use:

1. Spray the adhesive layer that remains when the window film (tinting film) is removed.
2. Let it soak in and use a plastic scraper or squeegee to scrape the adhesive together.
3. Use cleaning paper (300-040) to pick up the softened adhesive residue and wipe it off the surface. Repeat the procedure if necessary.
4. Then lightly spray the surface again and now clean it thoroughly with the SOTT UltraClean cloth (300-020) to leave a 100 % clean and degreased surface.

- Cleans glass, car paint and plastic no ADR, no hazardous substance
- Biodegradable
- No special protective equipment required can be applied with cloth, brush, roller or sprayer

Tint-Off Window Film Remover

600-T0

- 1 ltr bottle

Removing film from car windows can pose quite a problem. Tint-Off has been developed especially for this purpose. Apply this soluble remover to the existing film, cover with a piece of old film or liner. After a few minutes, remove the piece of old film or liner and the old window film will be released with it.

QUICK TIPS

Read the instructions on the packaging carefully

Price per piece

LIQUIDS PREPARATION

Adhesive Activator - 100 ml SOTT

600-AA1400-100

- Neutralises surfaces containing silicone
- Harmless to the substrate

Always a pain: film that releases out of recesses and channels. This could be for a number of reasons, but one of the main causes is the actual car paint.

Water based car paint: the main cause of poor film adhesion.

Modern car paints may contain silicon molecules. This is obviously going to cause reduced surface adhesion. This is not normally a problem on flat bodywork panels as neither the film nor the adhesive layer are under much tension. However, this tension is present in the recesses, channels and awkward corners with plastic bumpers, for example. Optimal adhesion in these areas is of paramount importance.

We all know what will happen to the film if there is not a 100% adhesion.

Due to the silicone content in modern car paint, the adhesion of film can be far from optimal. Film under tension (especially in recesses) is bound to come loose and ultimately be returned for repair or renewal.

Adhesive Activator AA-1400 appears to be the only product that successfully solves the problem of the poor adhesion of film to certain car paints. This industrial grade product is also used as a bonding agent for silicone sealants on a variety of surfaces, the sealing of exposed security film edges on glass being a prime example. Available in cans of 100ml.

The risks involved with water-based car lacquers:

Due to the silicone content in modern car lacquers the adhesion of film can be far from optimal. Film under tension (especially in recesses) is bound to come loose and ultimately be returned for repair or renewal.

Damaged film at the edges

Poor adhesion of full-colour prints

Application:

1. Thoroughly clean and degrease the application surface.
2. Using a cloth, apply a small amount of 600-AA-1400 to the surface and wait for approx. 15-30 minutes (depending on humidity levels).
3. Then apply the dry film to the primer and voilà, a much improved adhesion to the surface.
4. Finish by following the manufacturer's instructions.

QUICK TIPS

Bonding primer for water based car lacquers

LIQUIDS CLEANING

Glasscleaner SOTT

600-GC101

- For optimal cleaning and degreasing of glass to prepare it for the mounting of tinting film
- With a fresh and pleasant odour; no lingering nasty smells
- Deep-cleans and dries fast without leaving stripes.

When large shop windows or windows in or on offices are to be covered with tinting film or vinyl, good bonding is of the utmost importance. No glass is perfectly smooth - the small surface irregularities are going to get dirty. New glass often has paraffin wax on the surface. Our GlassCleaner cleans and degreases glass thoroughly for installation of film. Window film manufacturers recommend Dirt-Off for cleaning windows before film application. Contains a highly diluted 'acid' for completely removing grease, oil and dirt from glass without damaging its surface.

GlassCleaner draws the dirt out of the tiniest surface irregularities and lets it 'float', so it can be wiped away with a sponge, cloth or squeegee.

Harmless and with a pleasant odour

GlassCleaner is especially developed for regular use on large surfaces and lacks the typical offensive odour of alcohol- and ammonia-based cleaners. Also it is completely biologically degradable, non-corrosive and non-irritant. Good to know, next time you are spraying your cleaner around in a large office swarming with employees. There is no need to wear protective clothing or gloves.

Multifunctional!

GlassCleaner does more. Its formula makes it perfect as a general multifunctional cleaner for plastic boards, doors, tables tops, desks, shelves, etc

Instructions for use

Easy. Just spray the surface, if needed rub with a Scotchbrite Anti-Scratch scrub pas (300-025), then wipe away with a cloth or squeegee. Done!

Nothing more awkward than customers or staff complaining about the bad smell caused by cleaning the windows in a home or office. No more problems with the penetrating smell of ammonia or alcohol. GlassCleaner just smells fresh and does its job perfectly. And it can be used as interior cleaner!

Windows that reach down to the carpet or other valuable floor covering are popular and good-looking. But if your cleaner bleaches or tarnishes it, there will be trouble. GlassCleaner is your multi-functional cleaner that ONLY does what it SHOULD: it cleans the applied-on surface quickly, simply and without leaving any stripes.

1 L Bottle

600-GC101FLES

5 L Jerrycan

600-GC101CAN

QUICK TIPS

Suitable for cleaning:

- Large glass windows
- Glass tables and doors
- Acrylic, polycarbonate, etc.
- Rigid foam
- Objects that are coated with acrylic paint
- Tables, doors, desks
- Rabbets and frames

Price per piece

DIRT-OFF

600-DO

- 1 ltr
- As recommended by window film manufacturers

Window film manufacturers recommend Dirt-Off for cleaning windows before film application. Contains a highly diluted 'acid' for completely removing grease, oil and dirt from glass without damaging its surface.

Dirt-Off is also ideal for use as a bonding aid to improve adhesion to the dot matrix raster and the rear windscreen demister

The windows of second hand cars or cars that have been used for transporting a dog should be cleaned with Dirt-Off before applying window film.

The dot matrix raster around the edge of windscreens often present adhesion problems. Dirt-Off cleans these small areas thoroughly, thus ensuring improved adhesion.

slightly acidic
CLEANER for
car windows

Price per piece

- Developed especially for professional installers of all type of films
- Cleans car paint, metal, plastic, glass, bisonyl, etc, etc.
- Biologically degradable

SOTT Surface Cleaner-II is the number one cleaner in the selfadhesive film industry. It meets all of the demands of the installer; just spray Surface Cleaner-II on any surface.

It loosens the dirt and you just remove it with a dry cloth. Surface Cleaner works fast and dries during polishing. No stripes, lines or dirt getting spread around. Just grab the SOTT Surface Cleaner-II, spray, wipe with a dry cloth, job done!

This universal cleaner certainly lives up to its name: it can clean any surface, removing dirt, grease, adhesive residue, etc ready for film application. This product has been developed in accordance with the latest European standards and legislation, and conforms to all current environmental requirements.

*The fast
CLEANER
for all
surfaces*

QUICK TIPS

Suitable for cleaning:

- Large glass windows
- Glass tables and doors
- Acrylic, polycarbonate, etc.
- Rigid foam
- Objects that are coated with acrylic paint
- Tables, doors, desks
- Rabbets and frames

Paint, Plastic and Rubber

SurfaceCleaner-II is specially developed to, thoroughly and quickly, get a perfectly clean and grease-free surface on all types of vehicle substrates – paint, plastic and rubber. No whitening or burning of the clear coat. The mixture of special ingredients removes grease, grime, wax and adhesive residue at the molecular level.

Windows

Before you start installing window film, etch glass or vinyl lettering, you want to make sure the surface is completely clean. You'll be amazed at how effective and fast SurfaceCleaner-II does its job! It seeps under grease and dirt molecules that results in an easy wipe off and it evaporates quickly.

Signshop Workhorse

Plastic sheets, advertising signs or banner material? No worries. The multi-talent product called SurfaceCleaner-II is designed to be suitable for all types of applications.

QUICK TIPS

*CLEANER for
MATT and
GLOSS
car wrap film*

- The Number One cleaner for matt and gloss films

Car wrapping is really HOT at the moment, especially the matt colours. However, it won't have escaped the notice of car wrappers how much more difficult coloured matt films are to clean than coloured gloss. Why is this?

It's the dimples in the film

Matt films are somewhat structured with minute 'dimples' that deflect light to give it the matt appearance. These dimples collect street grime that is difficult to remove with ordinary cleaners.

Road salt, exhaust vapour and brake dust

Normal street grime is nowhere near as stubborn as the road salt used during the winter, especially when it's combined with asphalt and rubber. Add to that the steam from hot engines and the underside of cars that spreads to the sills and spoilers. Not to mention the dust from disc brakes that escapes through the wheels and clings to side of the car. This is a common problem especially with sports and executive models. These models are much closer to the road and the dirt; they tend to be driven faster, so the brake shoes are subjected to more wear, etc.

What does Carwrap Cleaner actually do?

Carwrap Cleaner loosens the dirt between the dimples and 'suspends' it until it's removed from the surface. The supplied car wrap sponges absorb the dirt preventing it from returning to the dimples. Then just rinse with clean water - job done!

Fashionable light colours such as matt white, matt silver or matt grey are notoriously difficult to clean.

A winter of road salt, a rainy day, or simply brake dust or exhaust vapour all present problems.

The car wash, steam cleaners or ordinary cleaners only remove surface dirt, and they always leave a dark haze on the film.

After Car Wrap Cleaner

Conventional washing

This Opel Astra speaks volumes. After not being washed for 3 months, this car was cleaned using the conventional method. Only the surface dirt was removed. At first sight, it looks fine. Only when the left hand side has been cleaned with Car Wrap Cleaner is the difference suddenly apparent.

This Astra speaks volumes. After not being washed for 3 months, this car was cleaned using the conventional method. Only the surface dirt was removed. At first sight, it looks fine.

QUICK TIPS

Don't!
Never use thinners, degreasers or surface cleaners for removing dirt. This will increase the problem much more.

Just do!
A great seller to add to your range!
Your car wrap clients can maintain the perfect look themselves if they purchase a Car Wrap Cleaner set.

QUICK TIPS

The special sponges can be ordered separately

LIQUIDS PROTECTION

Solar Varnish - Heat Protection Coating 5 L

600-SV5

- Blocks up to 85 % of the sun's heat (IR)
- 5 ltr can

Solar Varnish is an alkyd resin-based translucent white heat resistant coating that can be simply applied to glass, polycarbonate and acrylic. This coating blocks as much as 85 % of the sun's heat. Ideal for skylights in factory buildings etc. Solar Varnish contains reflective particles that reflect both UV and infrared light. In addition, the absorption is low, so there will be little radiant heat. The coating is translucent matte, so it is not transparent. The result after application is a milky white, translucent layer. The best installation temperature (environment) is 10-15 degrees. Do not apply during rainy, foggy or wet weather. Lifetime 8 years (horizontal: 3-4 years).

**SOLAR
REFLECTIVE
PAINT**

Technical information:

Visible light transmission: 25 %
Solar energy protection: up to 85 %
UV protection: 90 %
Glare reduction: 80 %
Absorption: 10 %
Consumption/capacity: 30m² (2 layers)

Instructions for use:

1. Substrate must be degreased and clean.
2. Can be applied by spray (for best result), brush or roller. Apply 2 layers.
3. Dilute the first layer with 50 % white spirit.
4. After 2 hours, the second layer (undiluted) can be applied. More information is enclosed in the package.

Price per piece

LIQUIDS INSTALLATION

Film-On - Slip Agent for Window Film and PPF SOTT

600-F0355

- Improved moisture distribution
- No more white haze or spots after application
- Easier positioning and squeegeeing
- Also useable as slip agent for ppf film

Film-On is the window tinter's friend and ppf's installers companion. It has unique properties not found in any other slip agents. It still has the edge on all other products on the market.

A colourless jelly-like concentrate for dilution in water. Just add a little to water, give it a quick shake and it's ready to use.

**window film
and PPF
application
made EASIER
than ever**

Film-On evaporates faster, and has a glutinous property that increases the viscosity of the solution. When it's sprayed on to glass, it stands firm unlike the soap and water solution that just cascades back down the glass.

You will notice immediately how much easier it is to slide the film. The solution between the glass and the film is softer and thicker which makes squeegeeing a lot easier.

White stripes and moisture build-up between the film and the glass during drying is also reduced (common with safety film) - a big plus! Adhesion is vastly improved.

A white haze or a collection of miniscule air bubbles is caused either by poor execution or by the reaction between the moisture and the adhesive layer of the film. FILM-ON almost eliminates the chance of white haze.

Price per piece

Slide-On™ Mounting Lubricant For Window Films - 500 ml SOTT ^{NEW}

600-F02

THIS EUROPEAN VERSION IS SIMILAR TO THE FAMOUS FILMON, BUT HAS MORE ADVANTAGES

**The new standard
in the windowfilm industry**

**window film
and PPF
application
made EASIER
than ever**

Improves and works faster than other concentrates.

Slide-On is the new standard!

The colourless gel mixes with water and increases its viscosity so that it spreads nicely over glass during spraying. A small film layer with sliding properties is literally sprayed onto the glass. This allows window film to slide and position easily. But there is another reason why TM is interesting. It slides on foams like soap, but disappears very quickly! And it should, because foam contains air, which is exactly what we don't want under the film. When the soap property disappears after positioning and racking the film, the adhesive layer does its job and starts the adhesion. No hazardous substance. Biodegradable

Instructions for use:

- Add 6-10 ml Slide-On™ to 1 liter of water. Shake and ready to use.
- Dosage amount depends on the ambient temperature. You can increase or decrease dosage as required.
- Always make sure spray tools are clean and clean any filters in the nozzle before starting."

How to dose.

- The bottle contains a small dosing chamber.
- This contains a measuring dosage in ml.
- Unscrew the cap of the dosing chamber. Now squeeze the bottle and through the small tube on the side, the concentrate will move up and fill the dosing chamber.
- Gently squeeze until the desired amount of concentrate has reached your targeted measure. Now you can pour the concentrate out of the dosing chamber without any problems.

QUICK TIPS

- Leaves no residue in spray bottles or tanks
- No white haze or air bubbles under the film
- Slide, position, touch and go!
- Foam disappears quickly
- Box of 6 bottles of 500 ml

Right-On Spray - Application Liquid

- Faster than soap and water
- Easy to use
- 3 minutes to position and make adjustments before adhesion starts

The one and only 3 minute APPLICATION LIQUID

The perfect solution for fast and effortless application of self adhesive films without air bubbles and wrinkling. Right-On allows the film to be repositioned after initial application.

It offers all the advantages of soap and water, but it works faster. Spray the substrate and adhesive layer of the film, apply the film and slide it effortlessly in to position. The film begins to bond after just 3 minutes and you can even start working it into channels immediately.

Right-On Spray will not affect the adhesive layer.

Suitable for use on all types of wet application film.

Hot garage? Sticky film? No Problem

On warm days, even the friendliest wrap film can get aggressive which can cause install times to shoot up as well as frustration levels. Using a thin mist of Right-On Spray on both the surface and adhesive can help that panel slide and glide. The unique blend of Right-On Spray won't compromise the adhesive so it's safe for all brands.

Quick and easy installing of PPF films

Right-On Spray is suitable and effective solution for PPF. It gives the installer the freedom to position and readjust which allows them to install with confidence. And because of the special ingredients in Right-On Spray, the final adhesion level is even improved when compared to other liquid carriers.

Oversaturated or Aggressive Full Print Wraps?

Printed film sometimes feels different, has harder tack and can be tough to install (especially when the panels are big). This is often caused by films that haven't properly outgassed or are oversaturated. Heat and humidity can also cause full print wraps to grip overly hard. Right-On Spray was made for just these situations. Simply spray, position, squeegee and you're done!

QUICK TIPS

This product has been developed in accordance with the latest European standards and legislation, and conforms to all current environmental requirements.

PROMOTIONAL TOOLS

Today's customers often know exactly what they want. But how do you convince your customer that you can offer them the best? That you have exactly what they need? Our support materials will help you do just that. For each specific topic, we have something that can help you with your sales or your presentation.

PROMOTIONAL MATERIALS

to convince your customer

Window Film Demo Box with 250V IR lamp 750-WFDB

- Seeing and feeling = believing! Let the customer experience the result himself
- Turnable box with four glass panels

The Window film DEMO BOX is intended to convince your customer that window film really works.

The box consists of a base with a turnable unit on top with four glass panels that can be tinted with window film as desired. Press the button and the 250 watt IR lamp turns on. The different types of window film on the glass panels allow your customer to clearly feel the difference in heat protection.

Our advice: leave one glass panel free of window film, so that the difference with and without film can be experienced very clearly.

220 V DEVICE EUROPEAN POWER CORD

QUICK TIPS The DEMO BOX is made of high-gloss acrylic. The glass panels can easily be changed by taking off the lid. The lamp is operated with a switch, which switches off automatically after 2 minutes.

Price per piece

Window Film Performance Box - Metal Case 750-WFP

- Seeing is believing!
- Convince your customer within 1 minute

The WINDOWFILM PERFORMANCE BOX immediately shows the heat difference between two window films and the temperature difference in both compartments. The ultra-strong metal case contains two compartments with a 150 W infrared lamp inside. Each compartment contains a sensitive temperature gauge and fan at the bottom. Between the lamp and the temperature gauge a glass plate with window film is placed*. Press the button and the lamps turn on. The temperature rises in both compartments, which can be read on the lower digital displays. The upper digital displays indicate the temperature difference between the ambient temperature with- and without the placed glass plate with window film.

After 1 minute the unit switches itself off.

UV Sentry Transmission Meter - Digital 750-WFUV

- Convince your customer with this meter
- Handy; operates on 9 v battery (included)
- Measures UV-A

The UV SENTRY is probably the simplest meter available to measure the amount of UV in the spectrum from 325 nm to 385 nm that passes through a transparent material. The meter measures transmission accurately to 0.1 %. The digital display is constantly updated with real-time measurements. Make an impact and convince your customer by illustrating the UV blocking properties of your product.

The meter can calculate the actual UV Transmission percentage of a given material. The UV SENTRY can be used to measure the UV characteristics of glass, film, coatings, laminates, or other materials. Use this meter to make convincing sales presentations. The UV SENTRY can effectively promote your UV-blocking products.

QUICK TIPS The meter works best with adequate UV light. During a cloudy day, the meter may not be able to detect the sun's rays sufficiently.

Price per piece

Light Meter - In Lux 750-WFL

- measuring range: 0.01 - 50,000 lux
- comes in storage bag

This digital light meter is a very precise measuring instrument with which the light intensity in a certain environment can be measured. After the measurement, you know exactly what to do when, for example, window films are applied to exterior windows and the incoming light is reduced.

QUICK TIPS Batteries included.

This can be hugely important, because rooms used by people must comply with a certain amount of light (indicated in lux), to perform optimally or live healthily. For example, the light in a waiting room should average 250 lux. For offices and laboratories 500 lux. For workshops, 750 lux. And for technical drawing, precision work and color assessment 7000 lux. The measurement is made via a photo element and is then displayed on the screen.

Price per piece

- 3 Devices in one case
- No more guessing and doubting

What kind of glass should you quote with? Is it single glass? Double? Triple? Is there a Low-E coating perhaps? How large is the distance between the multiple panes of glass? All important if you want to avoid problems like thermal breakage or wrong film choice.

As of now, you have a solution.

This professional kit contains all the gauges you need to know what type of glass you are dealing with. Often, your customer himself does not know what kind of glass he has in his building. Now you can check yourself and make your decision. Indispensable for every professional window film installer.

THIS IS WHAT YOU GET:

Toughened glass indicator

Several types of window film can often be mounted on tempered glass. But then you need to know if that is really the case. This indicator shows you exactly that. Vertical lines appear in the window when you are dealing with tempered glass. 2 lines when it is single glass tempered and 4 lines when you are dealing with double glass tempered.

Glass thickness and glass distance meter

This gauge shows exactly how thick the glass is, even when it is made up of several sheets of glass. It also measures the air gap between the glass panes. The following glazing's can be identified by this meter: where it is.

Low-E coating detector

Some types of glass have an invisible insulating and energy efficient factory coating. But which side is it on ? Inside, outside or in between ? This meter detects the coating and indicates where it is.

- SINGLE GLAZED
- DOUBLE GLAZED
- COATED DOUBLE-GLAZED (LOW-E ETC.)
- TRIPLE GLAZED
- LAMINATED SAFETY GLASS
- LAMINATED FIREPROOF GLASS (ALSO MULTIPLE LAYERS)

Price per piece

- Hard plastic
- 14 cm round and 3 cm high

The hard plastic SHAPE has everything to showcase a colour at its best. The round shape is convex, concave and also contains sharp kinks, so that the applied film colour shows to full advantage in every light and at every angle of vision.

showcase your vinyls in the perfect way

How can you demo your color selection in a beautiful and perfect way ? Display swatches of vinyl ? Only use a color chart ?

These white, plastic car shapes are hollow, lightweight and designed specifically for vinyl wrapping so their colors are shown in the best way possible. Your customer will get a better impression of how the vinyl looks on a curved shape instead of a small swatch out of a color collection.

Price per piece

- A must for every architect, designer and sign maker.

NT® Backing Slitter

100-024

- **Cut only the top or bottom layer with precision**
- **6 depth settings**

This handy slitter from NT is ideal for cutting to a specific depth with precision. Cut adhesive film without touching the backing paper/ supporting material, or, cut the carrier without touching the film. It is all possible with this slitter.

The depth is adjustable to 6 different positions. The blade in the plastic housing is made of superhard Tungsten Carbide and provides a perfect cut. The blade is not replaceable.

Price per piece

ROLLEPRO®

- **Install film over rivets, in channels and on bricks in no time!**

The well-known RollePro is the only tool that really works for installing film around rivets and applying wall films to brick or stone walls. The RollePro has a hard foam wheel that presses the film into and around curved or uneven surfaces. Install the film over the surface, warm it up and roll the RollePro over the shape or surface. Keep pressing firmly until the film has cooled off, then heatfix and you're done.

Price per piece

SOTT® Roller - Heavy Duty

- **150 mm (6") wide**
- **Top-heavy version; with bearings**

Professional roller mounted in ball bearings and intended for intensive use. Top heavy means that the actual rubber roller is the heaviest part of the tool allowing extra pressure to be exerted during application procedures. This is especially evident during the application of large areas of film. Less pressure needs to be applied as the roller does most of the work.

Price per piece

Installation Roller

NEW

150-202

- **Aluminium frame**
- **Medium soft rubber wheel**

Special pressing roller for installation of films in channels and trenches in vehicle bodywork. The advantage of a roller over a squeegee or rubbing with a glove, is that the (heated) film does not poach. A roller pushes the film everywhere evenly into the trench without moving it.

Tiles is not an easy surface to cover, especially when you must conform the film inside the joins. Here a tool that will help you out during this installation

Price per piece

STEINEL® Heat Gun Digital 2200 W - Soft

400-HL2020E

- **Perfect for sign makers and film installers**

Electronic adjustable temp. settings with memory. Infrared scanner is optionally placeable on top.

- **3 AIR FLOW SETTINGS**
- **80 - 630 °C**
- **2.2 M CABLE**

Price per piece

STEINEL® Heat Gun Expert - 2200 W + Extra Long Cable

400-HG2120E

- **Perfect for sign makers and film installers**

What a misery! On conventional hot air guns the power cord is too short, so many a times the plug gets pulled from the outlet when you are using it. This Heat Gun eliminates that problem. It has a 7.5 meter long industrial neoprene power cable.

Advantages: always flexible, better heat resistance and no more need for an extension cord.

- **3 AIR FLOW SETTINGS**
- **INFINITELY ADJUSTABLE TEMPERATURE SETTINGS FROM 80 - 630 °C**
- **7.5 M CABLE**

Price per piece

STEINEL® Heat Gun Expert - Battery

NEW

400-HG2120EB

How many times does the heat gun cable get stuck around the tires of a car or maybe a scaffold?

Here's the heat gun with a battery that allows you to work nimbly without worrying about unplugging and replugging cables from electrical outlets.

- **NO CABLE - HIGH-POWER - DIGITAL DISPLAY SETTING**
- **50 - 500 °C**

Price per piece

STEINEL® Battery for Heat Gun Expert

NEW

400-HGBAT

Battery for heat-gun 400-HG2120EB

Price per piece

STEINEL® Infrared Temperature Scanner

400-HLSCAN

- **Insurance cover for temperature**
- **Sensitive workpieces.**

Temperature scanner HL Scan monitors workpiece temperature by a beam of LED light. An acoustic and visual signal warns the user when temperature exceeds or falls below the permissible limit. For the 400-HL 2020E and 400-HG 2120E.

Price per piece

STEINEL® Guard Cage

400-HLGUARD

- **Protect yourself and the material**
- **specially for Steinell hot air tools**

This heat-resistant guard cage is easily slid onto the hot air tool and helps prevent burns to both the user, as well as material burns. An ideal tool for car wrappers, window tinters and interior film fitters.

The protective cage is made of heat-resistant plastic and is assembled in no time. It can also be used in conjunction with the HL Scan temperature scanner. Can be attached to HG 2320 E, HG 2120 E, HL 2020 E, HL 1920 E and HL 1820 S hot air tools.

Price per piece

STANLEY® Max Tape Rule - Professional **STANLEY**

A valuable addition to your tool kit and a sheer relief: finally you will be able to easily measure height without the blade bending due to wind or standout. You will be able to measure the length of an advertising board, neon sign or trailer, knowing the blade will stay straight and won't fall off the edge. These STANLEY MAX tape rules are ex-ceptionally sturdy, finally meeting the every-day needs of window film installers and signmakers.

The Yellow - 5® Cutting Ruler **SOTT**

YELLOW-5

Anti-slip cutting ruler, indispensable for signmakers, window tint installers and interior film installers, that need to cut straight lines without the cutting ruler sliding all over the place.

A unique solid aluminium cutting ruler with all of the advantages that you could possibly wish for: strong, stable, straight, but above all safe. This allows you to make long cuts with ease, without the fear of the knife 'jumping' and running across your fingers. The workshop becomes safer and production is increased. Large sheets of film and thick, rigid materials can now be cut with ease.

5 - Way Tool

150-035

Helper for holding window film adhesive film taut on windows at edges and corners during cutting. This grey version is made of soft pliable plastic and has rounded corners, so that the window film will not damage when slid or placed in a corner.

These are the 5 possibilities of using the 5-way tool:

Price per piece

The Factotum - II **SOTT**

150-095

- The solution for small corners, holes, seams and cracks
- Unbreakable material

Every mechanic knows it: mounting self-adhesive film in places that are hard to reach. The Factotum-II is a handy mini oval with two usable sides. It guides every film in the smallest corner or kink, without destroying the film while pressing. The smooth rounded corners give you the perfect opportunity to guide the film to where you want it.

Medium stiff and unbreakable.

Price per piece

The Finisher **SOTT**

150-101

- Press down film in the smallest little areas
- 2 Different spoon positions
- Coated metal spoons

A must-have for every installer. This pen-style tool has two smooth metal spoons, each at a different angle. The spoons are flat to allow for film to be expertly pressed down in otherwise unreachable places. Think of corners of car hoods, between rear lights and headlights, around grilles and door handles.

Price per piece

Little Willies - Set of 5 **SOTT** **NEW**

400-251

- Set of 5 pieces
- Ideal for pressing and guiding film in trenches
- Prevents cutting your fingers
- Cut resistance level 5

An alternative to a complete wrap glove.

Wrapping gloves are now fully established. But why should the WHOLE hand be covered with fabric if you often only use your fingers to push the film into the channels and kinks? Also: using a glove to grip the film's adhesive layer is not always wise; fibers and dust can stick to the adhesive layer from the glove. And we don't want that.

Simply place the Little Willies on just a few fingers. Use these fingers to press on the film and the other to grip the film and adhesive layer. Pretty as it can be. Comes in one size; elastic fabric.

Price for 5 pieces

SOTT® Anti - Cut Glove XL **SOTT** **NEW**

400-250

- Meets the ASTM/ANSI test: Cut level 5
- Smooth and tightly woven
- Set of 1 pair

Every installer knows the problem: accidentally cutting your hand or fingers. When large sheets of film, cardboard or plastic panels have to be cut, there is a risk of accidentally cutting your fingers. This can be avoided using the ANTI-CUT Glove. This glove is woven with a smooth fibre that prevents sharp objects from passing through it.

Price per piece

SOTT® Application Glove **SOTT**

400-252

Seamless application glove, made of elastic material. The white material helps you to check whether the surface and/or the vinyl is clean. Because of the perfect fit it gives you the necessary feeling that you need during your application work, especially when you deal with curved surfaces on cars. The glove is made of dust free material, so even touching the adhesive of the vinyl will not cause any residue to be left behind.

The Corner Sealer

400-CS01

Have you ever had small creases pop up at the corners of a wrap? Or small overlaps that lose their adhesion? This practical tool is intended for releasing the tension off installed film edges around corners. The CornerSealer allows you to melt small creases or curly film edges and close or flatten them.

QUICK TIPS

ABS housing Pocket-size Works on 2 alkaline batteries (not included)

HOW TO USE:

1. Make sure film is clean and degreased
2. Activate the device to preheat the flat head. This takes about 10-15 seconds (preheating time increases with deteriorating batteries).
- ATTENTION! Head can get hot!
3. Avoid skin contact to prevent injury
4. Place the flat head against the film area and push down firmly
5. Avoid overheating! 1-3 seconds of pressing is usually sufficient

Price per piece

Cutting Mat - Triple Layer

250 - SERIES

- 3 mm (120 mil) thick double layer calibrated cutting mat
- Available in black, green and transparent

High quality cutting mat which closes after every cut, preventing your knife from following previous cuts. These mats are triple layer enabling both sides to be used. So they'll last twice as long!

OLFA® Cutting Mat Multi - Purpose Self - Healing Craft **OLFA**

250-CM SERIES

- One side shows cm, other side shows inches

CM series multi-purpose self-healing cutting mats are 2 mm thick and especially designed for use with OLFA® standard-duty cutters, heavy-duty cutters, art knives, rotary cutters and specialty cutters. Double-sided with green base color and white grid lines with a metric grid on one side and an inch grid on the other. Grid lines are designed for easy measuring and for accurate cutting of straight lines and precise angles.

Self-healing, an OLFA® original technology refers to the ability of the surface to return to its original shape after being cut and are ideal for general quilt cutting. A three-layer structure and soft cutting surface realize smooth cutting even after many years use. OLFA® CM mats protect your work area and greatly extend the life of your blades.

QUICK TIPS

WARNING!

- Keep the mats away from sunlight and heat
- Mats must be stored flat
- Not suitable for use with steam irons
- Not suitable for use with OLFA MC-45 and MC-45/DX

Surface Cleaner II

SOTT

600-SC02FLES

- Developed especially for professional installers of all type of films
- Cleans car paint, metal, plastic, glass, bisonyl, etc, etc.
- Biologically degradable
SOTT Surface Cleaner-II is the number one cleaner in the selfadhesive film industry. It meets all of the demands of the installer; just spray Surface Cleaner-II on any surface.
It loosens the dirt and you just remove it with a dry cloth. Surface Cleaner works fast and dries during polishing. No stripes, lines or dirt getting spread around. Just grab the SOTT Surface Cleaner-II, spray, wipe with a dry cloth, job done!
This universal cleaner certainly lives up to its name: it can clean any surface, removing dirt, grease, adhesive residue, etc ready for film application. This product has been developed in accordance with the latest European standards and legislation, and conforms to all current environmental requirements.

Price per piece

Industrial Degreaser - Silicone Cleaner

SOTT

600-T800FLES

- Harmless for car paints
- Removes silicone, grease, tar, oil, adhesive, paraffin and car importer's wax
A unique balanced product that was especially commissioned and developed some 20 years ago for use in the metal fabrication, automotive and advertising industries. Used extensively in the metal fabrication industry for degreasing prior to chroming or galvanizing. SO THIS IS A REAL DEGREASER!

Price per piece

Silicon - Wax Remover

600-T900

- The best solution for removing stubborn wax
Durable surfaces such as car paint are often treated with a protective layer. The most conventional way to do this is to use a silicone-based wax. Since silicone has a repellent effect, this is ideal to prevent dirt. However, self-adhesive materials such as stickers, strips and wrap films will also no longer be able to adhere.
To be able to do this, the wax must be removed. SOTT 600-T900 Industrial Silicon & Wax Remover ensures that the wax becomes soft and dissolves, so that it can then be removed with a soft cloth.

Price per piece

Roll Dispenser

500-050

- Indispensable in every workshop
Metal dispenser for rolls of triple layer polishing paper (300-040). This handy dispenser holds a roll of polishing paper and allows individual sheets to be torn off across a black perforated guide at the top. The dispenser can be folded for easy transportation.

QUICK TIPS
